Student Enrollment & Course Management System (SECMS)

1. INTRODUCTION

1.1 Project Overview :

The Student Enrollment and Course Management System is a Salesforce-based application designed to manage student information, course details, instructor data, and enrollment records in a centralized platform. The system helps administrators efficiently organize and maintain student records, assign courses, and track enrollments. By using Salesforce custom objects and features, the project simplifies the process of storing and managing educational data.

This system also provides reporting and dashboard capabilities that help users analyze important information such as student enrollment status, course participation, and revenue generated from course fees. With the help of these features, administrators can make better decisions and monitor the overall performance of the enrollment process. The project demonstrates how Salesforce can be used to build an effective data management solution for educational institutions.

1.2 Purpose

The purpose of the Student Enrollment and Course Management System is to create a centralized platform for managing student information, course details, instructor data, and enrollment records using Salesforce. This system helps administrators organize and maintain important data efficiently while reducing manual work and improving data accuracy.

The system also aims to simplify the process of student enrollment and course management by providing an easy way to track student registrations, assign courses, and monitor enrollment status. Additionally, reports and dashboards help users analyze data and gain insights into student participation and course performance, enabling better decision-making within the organization.

2. .IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Enrollment Officer	manage student enrollments efficiently	enrollment data is scattered	systems are manual and UN integrated	frustrated and error-prone
PS-2	Administrator	track enrollments and revenue	reporting is delayed	data is not centralized	uncertain in decision-ma king

3. IDEATION PHASE

3.1 Problem Statement (Customer Problem Statement Template)

Educational institutions often face challenges in managing student information, course details, and enrollment records efficiently. Many organizations still rely on manual processes or scattered systems to store and track this data, which can lead to data duplication, errors, and difficulty in accessing important information. Managing student registrations, assigning courses, and tracking enrollment status becomes time-consuming without a centralized system.

Due to the lack of an organized platform, administrators may find it difficult to monitor course participation, instructor assignments, and revenue generated from course fees. Therefore, there is a need for a reliable and centralized solution that can efficiently manage student enrollment and course information. Implementing a Student Enrollment and Course Management System using Salesforce helps address these challenges by providing structured data management, automation, and reporting capabilities.

3.2 Empathy Map Canvas

User: Enrollment Officer

Says

- I need an easy way to manage student enrollments.
- It should be simple to assign students to courses.
- I need reports to track enrollment status and course participation.

Thinks

- Managing student and course data manually takes too much time.
- A centralized system will help organize all enrollment information.
- Automated reports will help track student progress and course demand.

Does

- Adds student details into the system.
- Assigns students to available courses.
- Updates enrollment status and checks reports.

Feels

- Frustrated when data is difficult to manage manually.
- Needs a reliable system to store and track enrollment information.
- Feels confident when using an organized platform like Salesforce.

3.3 Brainstorming & Idea Prioritization

Step 1 – Brainstormed Ideas

- Spreadsheet automation
- Standalone enrollment portal
- ERP integration
- Salesforce-based enrollment system

Step 2 – Grouping

- Manual solutions
- Semi-automated solutions
  Fully automated cloud
  solutions

Step 3 – Prioritization

Salesforce-based SECMS was selected due to **high feasibility** and **high impact**.

In this step, the most important features of the system were identified and prioritized based on user needs. The focus was on selecting functionalities that would improve the efficiency of managing student enrollments and course information.

The key features prioritized for this project include managing student records, maintaining course details, assigning instructors, and tracking student enrollments. Additional features such as reports and dashboards were also prioritized to help users analyze enrollment data and monitor course performance effectively. These prioritized features ensure that the system meets the core requirements of the Enrollment Officer and improves overall data management.

4. REQUIREMENT ANALYSIS PHASE

4.1 Customer Journey Map

Stages covered:

- Awareness & Registration
- Course Selection
- Enrollment Request
- Fee Payment
- Approval
- Instructor Assignment
- Reporting & Completion

4.2 Solution Requirements

Functional Requirements

FR No	Epic	Description
FR-1	Student Management	Manage student records
FR-2	Course Management	Create and manage courses
FR-3	Enrollment Processing	Request, approve, reject enrollments
FR-4	Instructor Assignment	Auto-assign instructors
FR-5	Reporting	Dashboards and reports

Non-Functional Requirements

NFR-1: Usability

The system shall provide a simple, intuitive, and user-friendly interface that enables enrollment officers, administrators, instructors, and students to perform operations efficiently with minimal training. Navigation shall be organized through clearly labeled tabs, dashboards, and forms to reduce user effort and errors.

Examples:

- Quick student registration form
- One-click enrollment approval
- Role-based dashboards

NFR-2: Security

The system shall ensure the confidentiality, integrity, and protection of student and institutional data through secure authentication, authorization, and access controls. Sensitive information such as personal data, enrollment history, and academic records shall only be accessible to authorized users.

Examples:

- Only admins can modify course details
- Instructors view only assigned students
- Students cannot access other student records

NFR-3: Reliability

The system shall operate consistently and accurately without failures during enrollment processing, approvals, and reporting. Automation logic shall execute correctly to avoid duplicate or incorrect enrollments.

Examples:

- No duplicate course registration
- Accurate status updates after approvals
- Consistent report generation

NFR-4: Performance

The system shall provide fast response times for all operations to ensure smooth and uninterrupted user experience, especially during peak admission periods.

Examples:

- Quick dashboard refresh
- Fast search for student records
- No lag during bulk uploads

NFR-5: Scalability

The system shall support future growth in the number of students, courses, departments, and users without degradation in performance or functionality. It shall allow easy addition of new modules and features.

Examples:

- Add new departments without redesign
- Handle increased admissions annually
- Extend to mobile or portal integration

NFR-6: Availability

The system shall be continuously accessible to users during institutional working hours and must minimize downtime. The platform shall support high availability for academic operations.

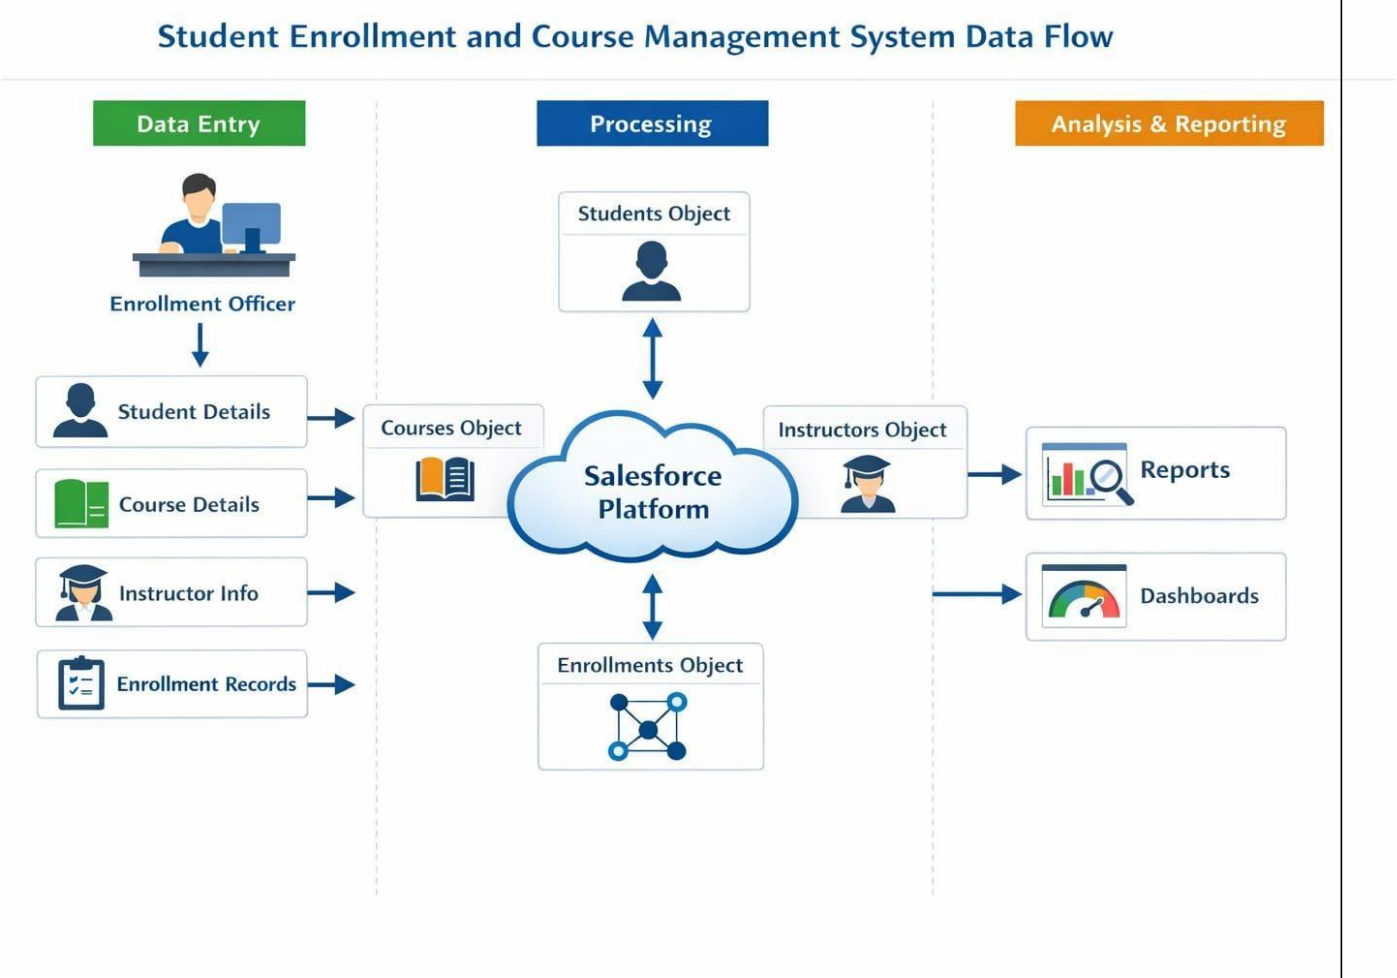
Examples:

- 24/7 cloud access
- Reliable during peak admission season
- Automatic backup of student records

4.3 Data Flow Diagram

- User inputs student and enrollment data
- System validates and stores records
- Approval process routes data
- Reports and dashboards consume processed data.

The system processes enrollment requests, validates data, routes approvals, assigns instructors, and generates reports.



4.4 Technology Stack

Layer	Technology
UI	Salesforce Lightning
Logic	Salesforce Flows
Database	Salesforce Objects
Automation	Validation Rules, Approval Process
Reporting	Reports & Dashboards

5. PROJECT DESIGN PHASE

5.1 Problem–Solution Fit

SECMS directly addresses fragmented enrollment workflows by aligning user behavior, constraints, and automation using Salesforce-native capabilities.

The Student Enrollment and Course Management System was developed to address the challenges faced by educational institutions in managing student and course information efficiently. Manual management of student records and course enrollments can lead to data errors, duplication, and difficulty in tracking important information. This creates problems for enrollment officers when handling large amounts of data.

To solve these challenges, the system uses the Salesforce platform to create a centralized and organized database for managing students, courses, instructors, and enrollments. The system allows users to easily store, update, and track enrollment data. Reports and dashboards provide useful insights into student participation and course performance, helping administrators make better decisions and manage the system more efficiently.

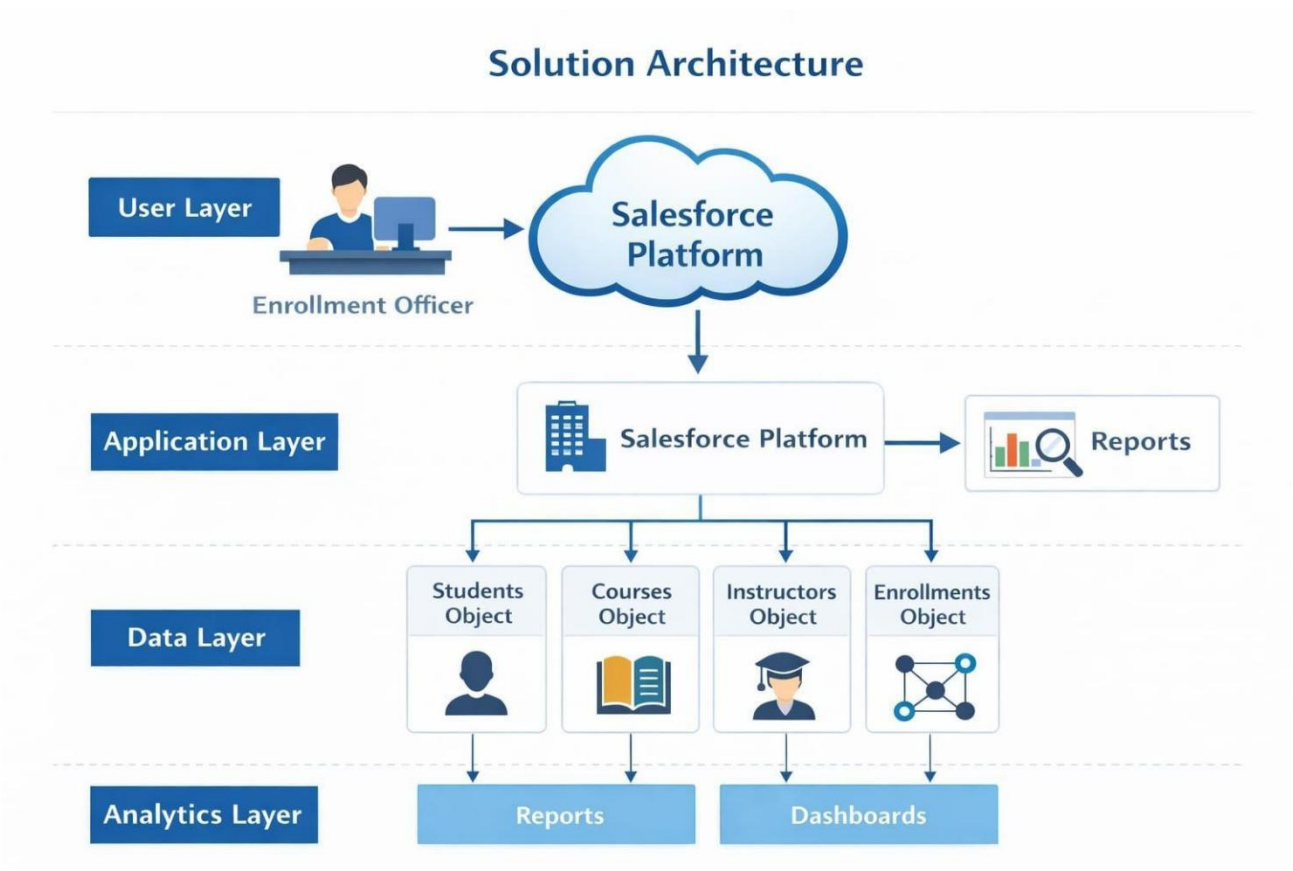
5.2 Proposed Solution

Functional Requirements

Parameter	Description
Problem	Manual enrollment handling
Solution	Salesforce-based SECMS
Novelty	End-to-end automation
Social Impact	Improved student experience
Revenue Model	Institutional deployment
Scalability	Multi-department support

5.3 Solution Architecture

The architecture integrates Salesforce objects, automation flows, approval processes, dashboards, and security layers.



6. PROJECT PLANNING & SCHEDULING

6.1 Project Planning

- Agile methodology
- Epics - Stories - Story Points
- Sprint-based execution
- Velocity calculation used for estimation

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Numbe r	User Story / Task	Story Points	Priority	Team Member s
Sprint-1	Developer Setup	USN-1	As a system administrator, I want to create a Salesforce	1	High	Varshini

			developer account so that I can configure and deploy the Student Enrollment system..			
Sprint-1	Custom Object	USN-2	As an admin, I want to create custom objects for Student,Course, Enrollment, and Instructor so that academic data can be stored and managed efficiently.	5	High	Varshini
Sprint-2	Tabs	USN-3	As a user, I want dedicated tabs for each object so that I can easily navigate between students, courses, enrollments, and instructors.	5	High	Nandhini
Sprint-2	Lightning App	USN-4	As an admin, I want to create relevant fields such as student details, course information, and enrollment status so that complete records can be captured accurately.	5	High	Jayasri
Sprint-2	Fields	USN-5	As an enrollment officer, I want a centralized Lightning App so that I can access all academic operations from one interface.	5	High	Kumaravalli
Sprint-2	Create Relationships	USN-6	As an admin, I want to define relationships between students, courses, and enrollments so that the system can logically link and track academic activities.	5	High	Abarna
Sprint-2	Page Layout Customization	USN-7	As a user, I want customized page layouts so that only relevant information is displayed, improving clarity and ease of data entry.	5	High	Varshini
Sprint-3	Flows	USN-8	As a system, I want to validate input data such as mandatory fields and enrollment limits so that incorrect or incomplete records are prevented.	5	High	Abarna
Sprint-3	Validation Rules	USN-9	As a system, I want automated flows to handle enrollment processing and notifications so that manual effort is reduced	5	High	Kumaravalli

			and processes become faster.			
Sprint-3	Approval Process	USN-10	As an administrator, I want an approval process for enrollment requests so that registrations are verified before confirmation.	5	High	Nandhini
Sprint-4	Security	USN-11	As an admin, I want to configure role-based security so that users can only access data relevant to their responsibilities.	5	High	Jayasri
Sprint-5	Reports	USN-12	As a manager, I want reports on student enrollments, course registrations, and instructor assignments so that I can monitor academic operations.	5	High	Kumaravalli
Sprint-6	Dashboards	USN-13	As a manager, I want visual dashboards showing enrollment statistics and trends so that I can quickly analyze system performance.	5	High	Varshini

Project Tracker, Velocity & Burn-down Chart: (4 Marks)

Print	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	4 Days	06 Mar 2026	07 Mar 2026	12	13 Mar 2026
Sprint-2	20	4 Days	07 Mar 2026	09 Mar 2026		
Sprint-3	20	4 Days	09 Mar 2026	10 Mar 2026		
Sprint-4	20	4 Days	11 Mar 2026	12 Mar 2026		

7. Project Development Phase:

Project Flow:

Milestone 1: Salesforce Developer Account Creation
Milestone 2: Custom Object Creation (Student, Course, Enrollment, Instructor)
Milestone 3: Tabs Creation
Milestone 4: Lightning App Creation
Milestone 5: Fields Creation
Milestone 6: Create Relationships
Milestone 7: Page Layout Customization
Milestone 8: Validation Rules
Milestone 9: Flows (Automation)
Milestone 10: Approval Process
Milestone 11: Reports
Milestone 12: Dashboards
Milestone 13: Security Setup
Milestone 14: Conclusion

What you'll learn

1. Real-time Salesforce project implementation
2. Designing custom objects and relationships
3. Creating page layouts & record types
4. Writing validation rules
5. Building automation with flows
6. Creating approval workflows
7. Developing reports & dashboards
8. Setting up security with profiles, permission sets, and sharing
9. End-to-end application testing

Milestone 1-Salesforce :

Introduction:

Salesforce is one of the world's leading cloud-based Customer Relationship Management (CRM) platforms. It helps organizations manage their data, improve customer relationships, and streamline business processes through a centralized system. By using Salesforce, companies can store, track, and analyze important information such as customer details, sales activities, and service requests in a secure cloud environment.

One of the main advantages of Salesforce is its flexibility and scalability. It allows users to create custom objects, automate workflows, generate reports, and build dashboards to visualize business data. With its user-friendly interface and powerful tools, Salesforce enables organizations to increase productivity, make better decisions, and improve overall efficiency. Because of these capabilities, Salesforce is widely used across different industries including education, healthcare, finance, and retail.

What Is Salesforce?

Salesforce is your customer success platform, designed to help you sell, service, market, analyze, and connect with your customers.
Salesforce has everything you need to run your business from anywhere. Using standard products and features, you can manage relationships with prospects and customers, collaborate and engage with employees and partners, and store your data securely in the cloud. So what does that really mean? Well, before Salesforce, your contacts, emails, follow-up tasks, and prospective deals might have been organized something like this:
https://youtu.be/r9EX3lGde5k

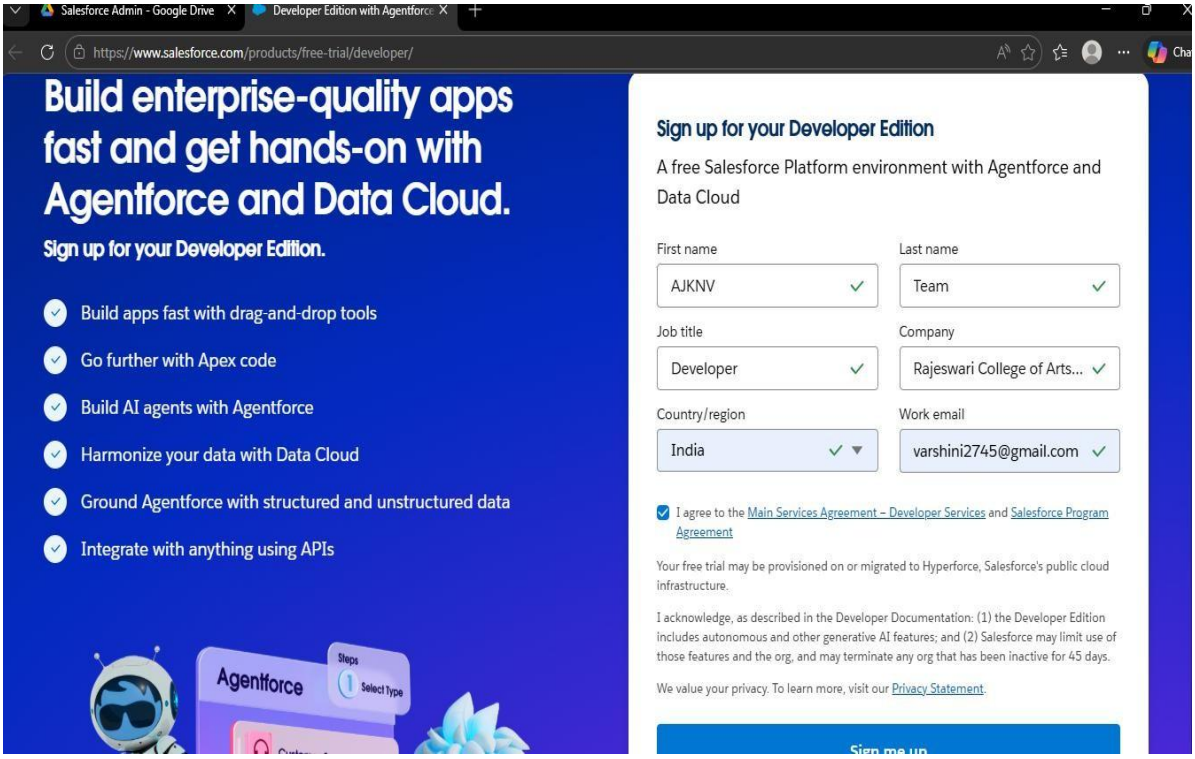
Activity 1: Creating Developer Account:

To start working with Salesforce, a Developer Account must be created. A Salesforce Developer Org provides a free environment where users can learn and practice Salesforce features.

First, open the Salesforce Developer signup page by visiting:
https://developer.salesforce.com/signup
Next, fill in the required information in the signup form. Enter your First Name and Last Name, provide a valid Email Address, and select the Role as Developer. In the Company field, enter the name of your college or organization. Choose India as the country and enter your postal code.

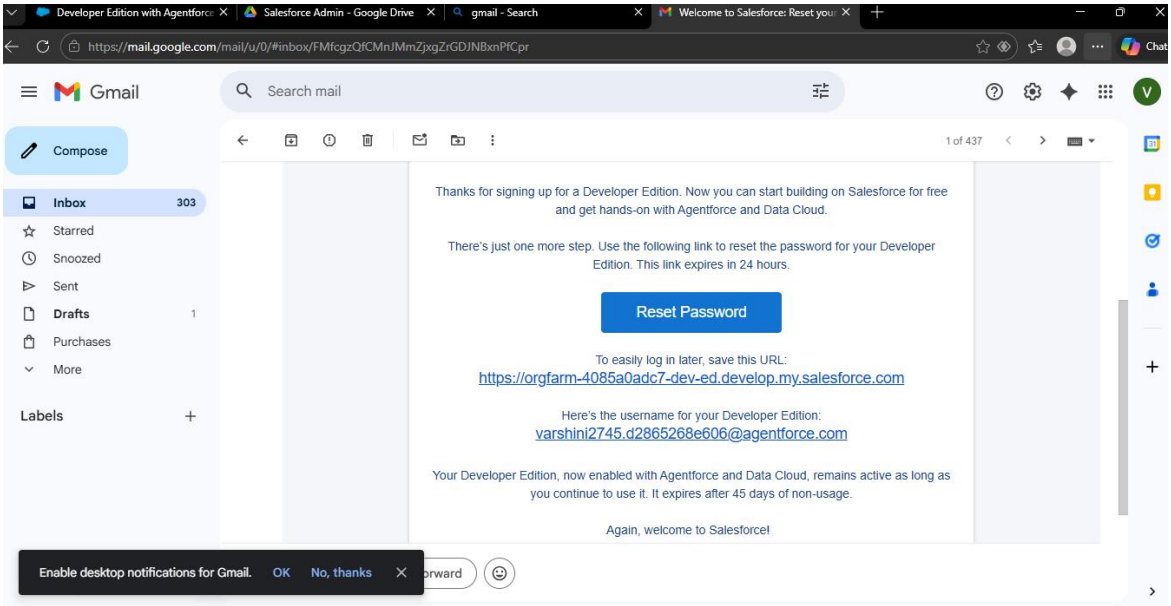
For the Username, create a unique value using your name and organization. The username does not need to be a real email address, but it should follow the email format such as username@organization.com. After entering all the details, click on Sign Me Up to submit the form. a developer org in salesforce.

Go to https://developer.salesforce.com/sign up On the sign up form, enter the following details:



Activity 2: Account Activation:

1. After submitting the signup form, Salesforce will send a verification email to the email address provided during registration. This email is used to activate the developer account.
2. Open your email inbox and look for the verification email from Salesforce. Sometimes the email may take 5 to 10 minutes to arrive. Once you receive it, click on the Verify Account link provided in the email.
3. After clicking the link, you will be asked to create a password and set up a security question for your account. Once these details are entered, click on Change Password.
4. After completing this step, your Salesforce Developer Account will be successfully activated, and you will be redirected to the Salesforce setup page, where you can start using the platform.



Milestone 2 – Objects:

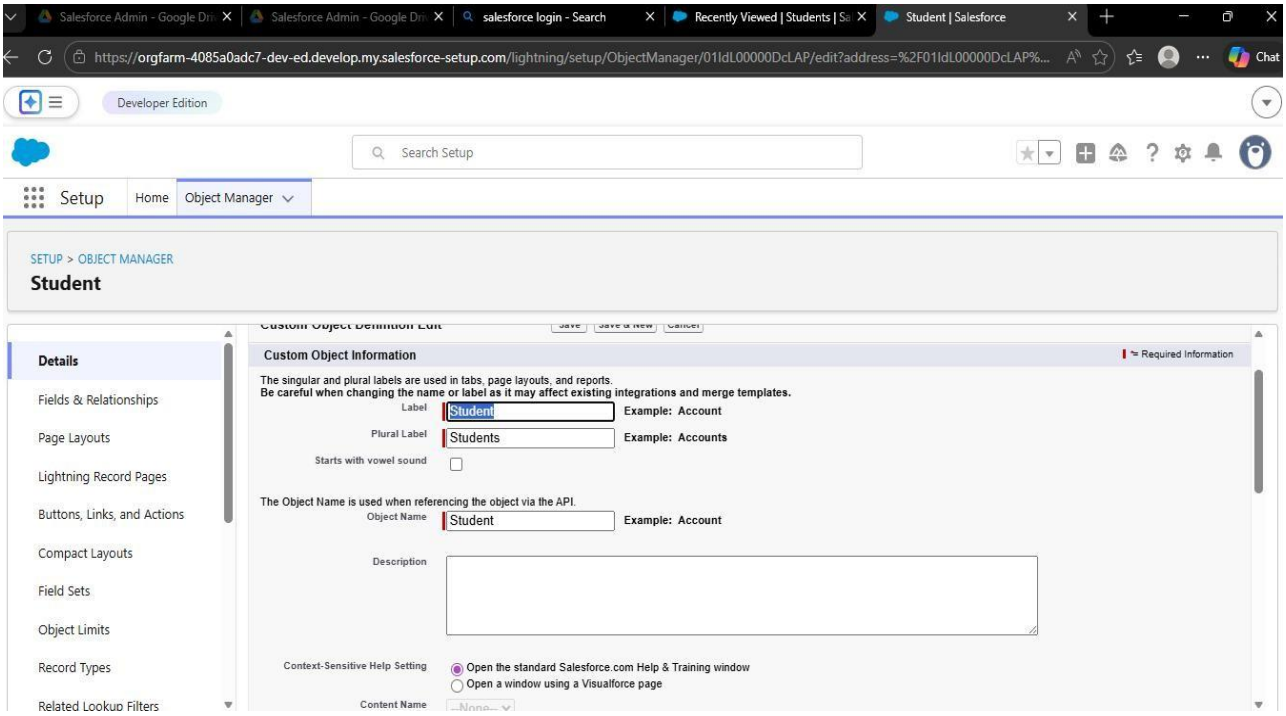
Activity 1: Creating Student Object:

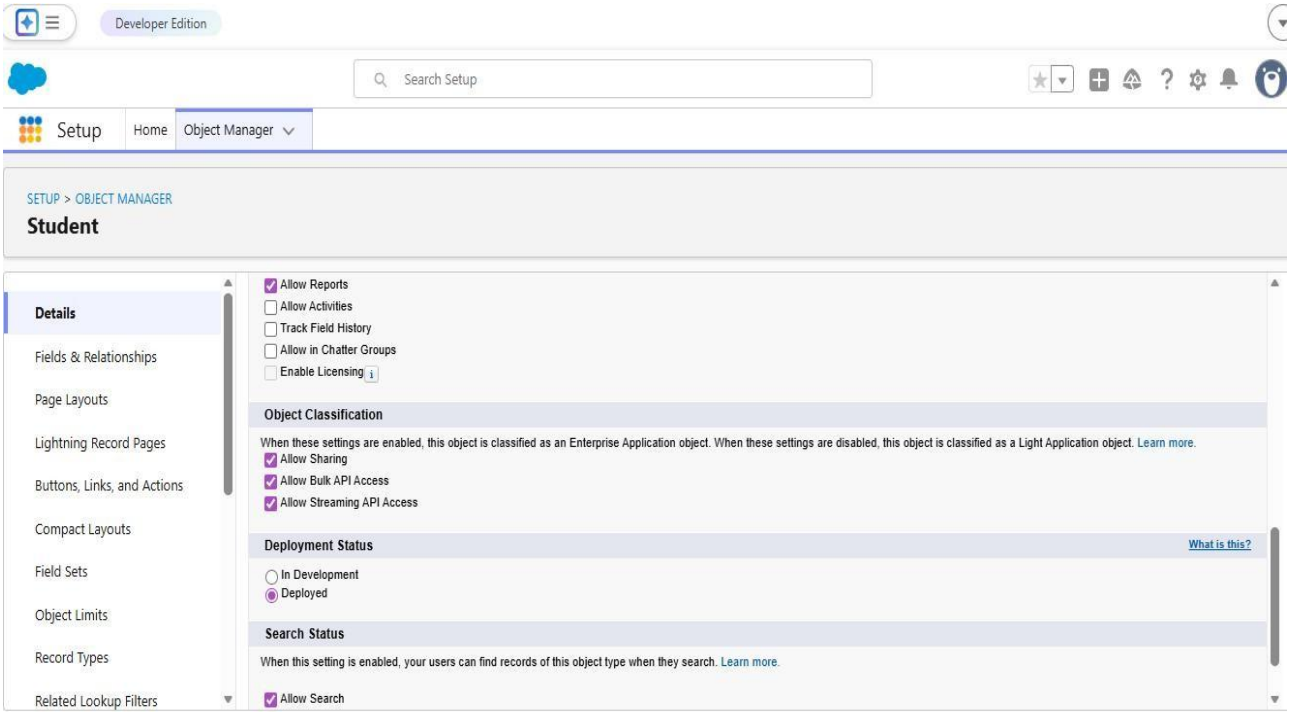
The Student custom object is created to store and manage student-related information within the Salesforce system. This object helps maintain details such as student name, contact information, and other important data required for managing enrollments.

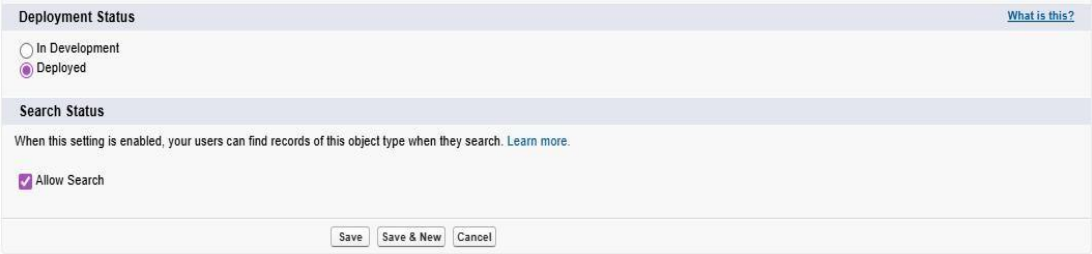
To create the Student object, first open the Setup page in Salesforce. From the Setup menu, navigate to Object Manager, which is used to manage standard and custom objects. Next, click on Create and select Custom Object.

In the custom object creation page, enter the required details. Provide Student as the Label, and Students as the Plural Label. The Object Name should also be set as Student. For the Record Name, enter Student Name and select the Data Type as Text.

Save to create the Student object.







In the same way Create **Courses, Instructors,** and **Enrollments objects**

Milestone 3 - Fields:

Table 1: Student Object Fields:

Field Label	Data Type
Student Name	Text (Standard)
Email	Email
Phone	Phone
Date of Birth	Date
Student Status	Picklist
Address	Text Area

Table 2: Course Object Fields:

Field Label	Data Type
Course Name	Text (Standard)
Category	Picklist
Duration	Number/Text
Course Fee	Currency
Description	Text Area

Table 3: Instructor Object Fields

Field Label	Data Type
Instructor Name	Text (Standard)
Instructor Code	Text
Expertise	Picklist
Phone	Phone
Email	Email

Table 4: Enrollment Object Fields:

Field Label	Data Type
Student	Lookup (Student)
Course	Lookup (Course)
Instructor	Lookup (Instructor)
Enrollment Date	Date
Enrollment Status	Picklist
Fees Paid	Checkbox
Total Amount	Currency
Comments	Text Area

Milestone 4 – Create Relationships:

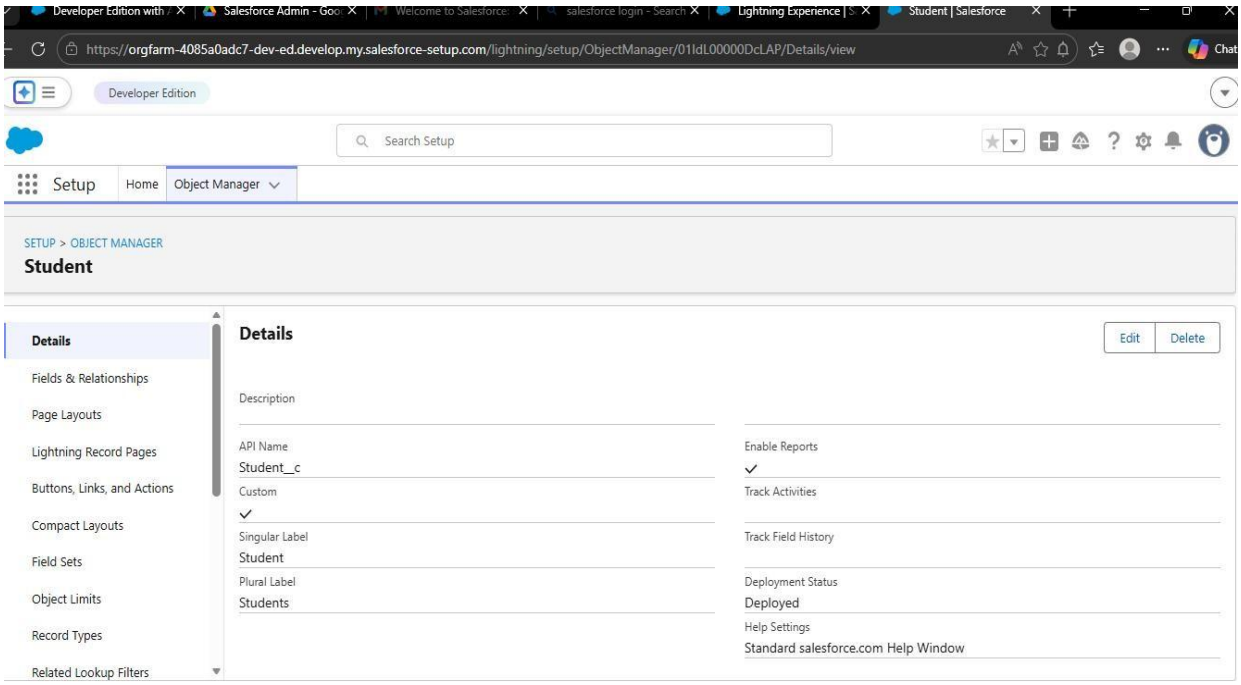
1. **Activity 1: Create Lookup from Enrollment to Student:**

This relationship is created to connect each Enrollment record with a Student record. It helps track which student is enrolled in a particular course.

Steps

1. Go to Setup in Salesforce and open Object Manager.
2. Search for Enrollment in the Quick Find box and select the Enrollment__c object.

3. Click on Fields & Relationships and then click New.
4. Select Lookup Relationship as the field type and click Next.
5. In the Related To field, choose Student__c and click Next.
6. Enter Student as the Field Label (API Name: Student__c).
7. Click Next through the Field-Level Security and Page Layout settings, making sure the field is visible and added to the layout.
8. Click Save to create the relationship.



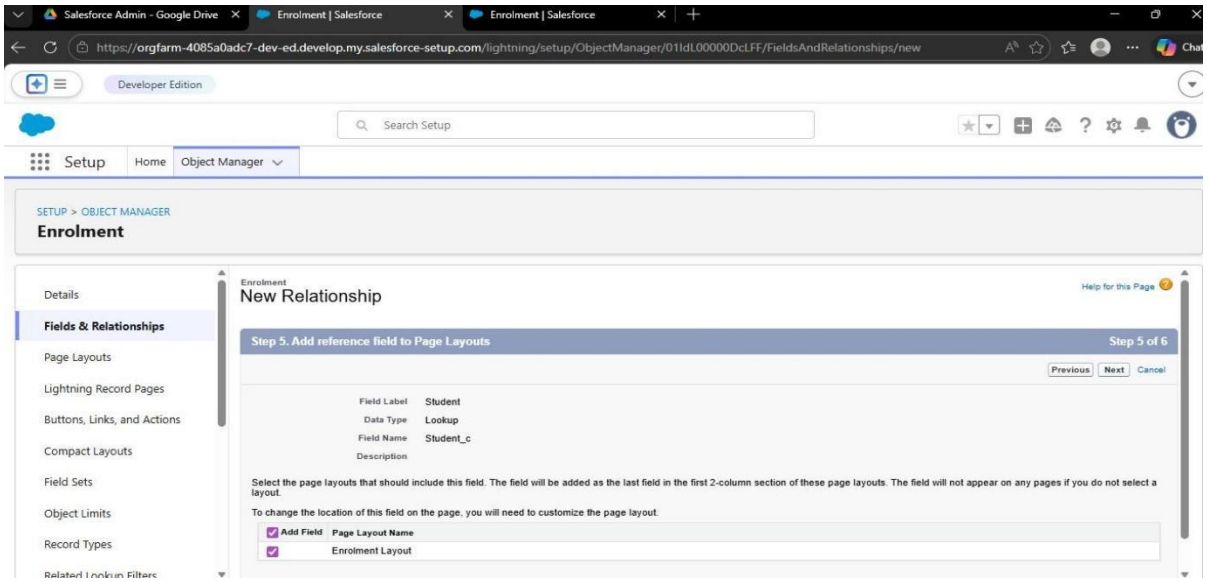
Activity 2: Create Lookup from Enrollment to Course

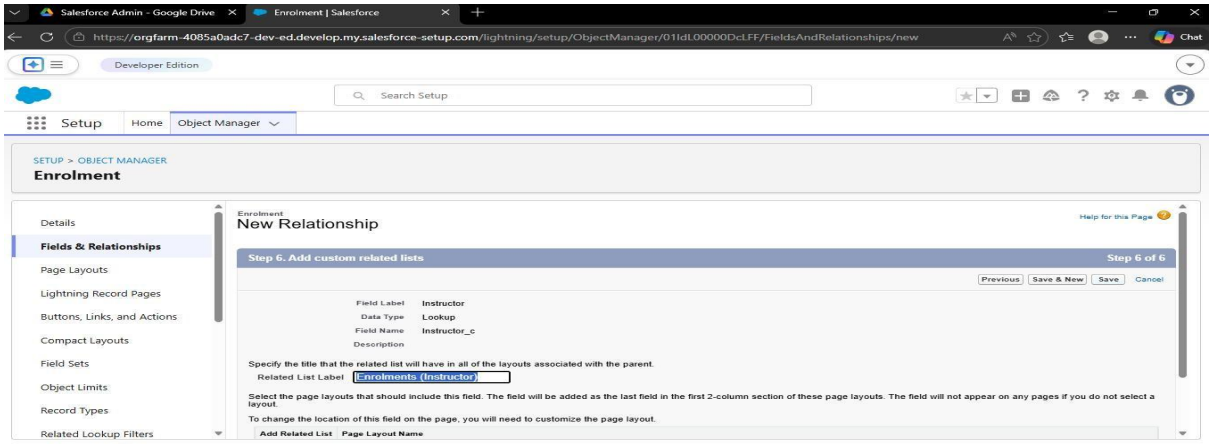
Purpose

This relationship links each Enrollment record to a specific Course, allowing the system to track which course a student has enrolled in.

STEPS

1. Navigate to Setup - Object Manager - Enrollment_____c.
2. Click Fields & Relationships and select New.
3. Choose Lookup Relationship and click Next.
4. In the Related To field, select Course__c and click Next.
5. Enter Course as the Field Label (API Name: Course__c).
6. Click Next, configure the Field-Level Security and Page Layout options if needed, and then click Save.





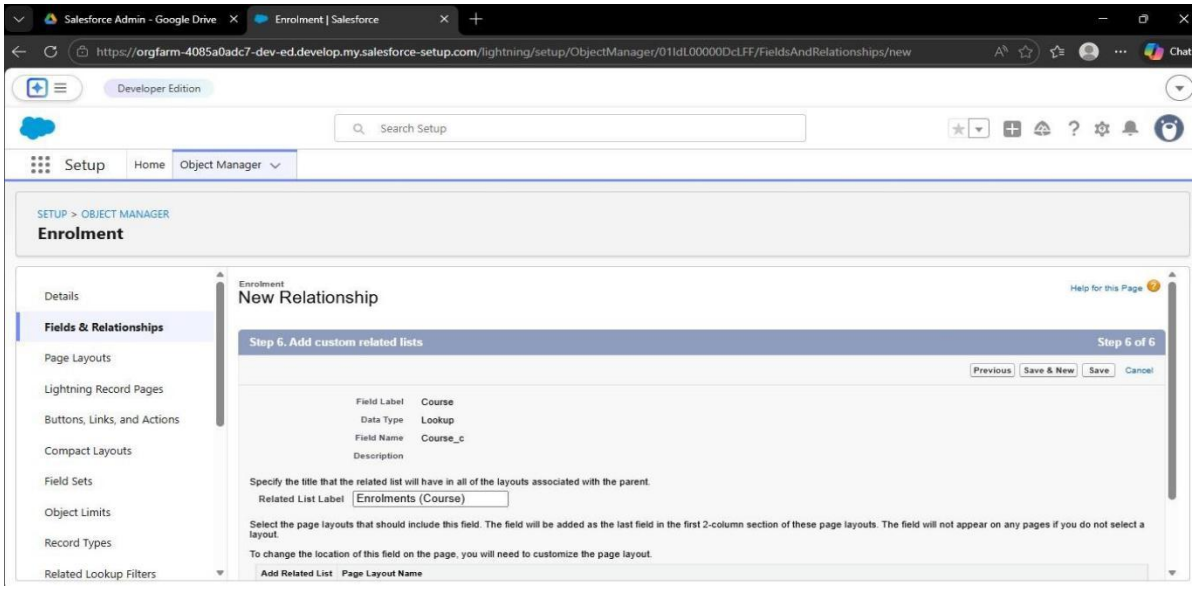
Activity 3: Create Lookup from Enrollment to Instructor:

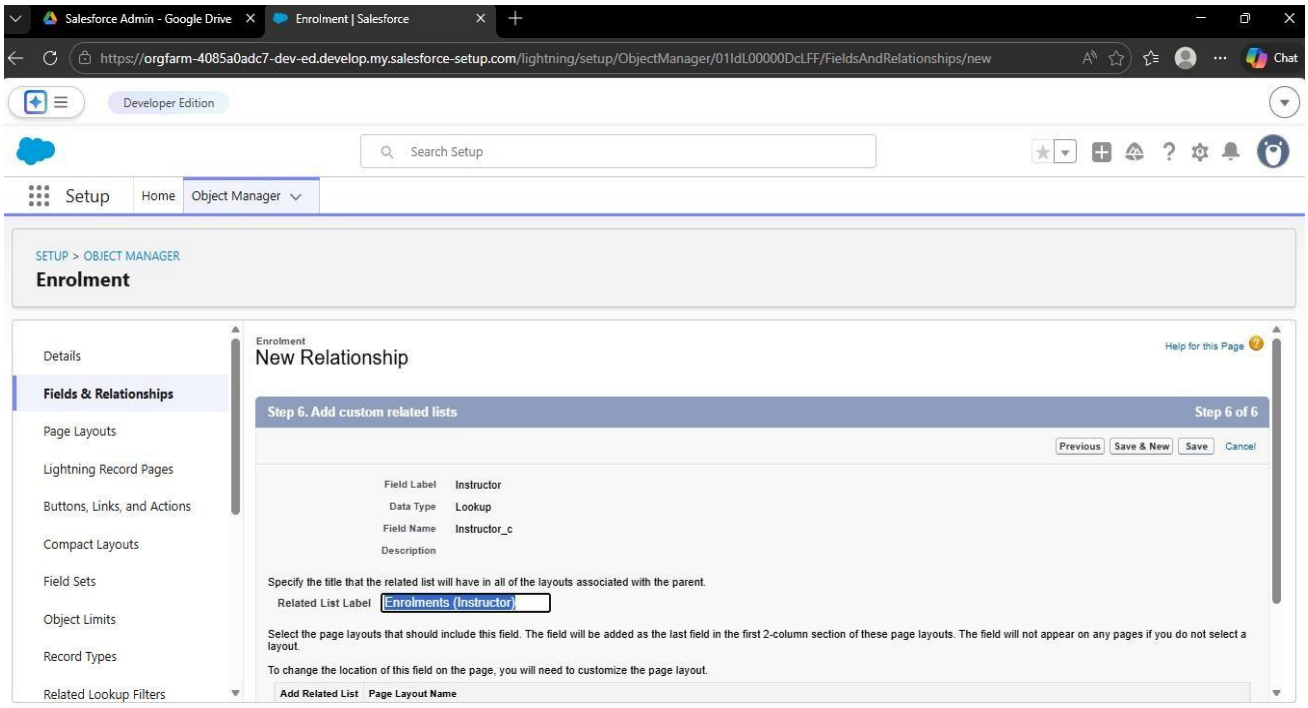
Purpose

This relationship is used to assign an Instructor to each Enrollment record, helping identify which instructor is responsible for the course.

Steps

Go to Setup - Object Manager - Enrollment__c.Click Fields & Relationships and select New.Choose Lookup Relationship as the field type and click Next.In the Related To field, select Instructor_c and click Next.Enter Instructor as the Field Label (API Name: Instructor_c).Configure the Field-Level Security and Page Layout settings as required, then click Save to complete the relationship.





Milestone 5 – Validation Rules:

Activity 1: Student Email Domain Validation

Purpose:
To ensure students use only allowed institutional email

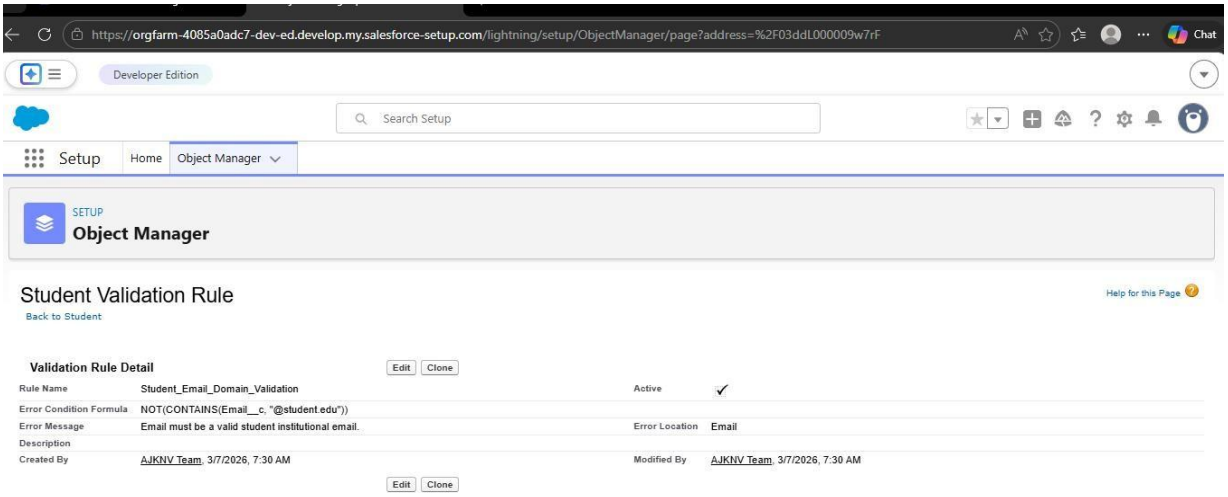
addresses.

Steps:

Go to Setup → Object Manager →
Student_c.
Click Validation Rules → New.
Rule Name:
Student_Email_Domain_Validation. Error
Condition Formula: (example for @student.edu)

1. NOT(CONTAINS(Email___c, "@student.edu"))

Error Message: Email must be a valid student institutional
email. Error Location: Field →Email____c.
Click Save.



Activity 2: Fees Must Be Paid Before Approval

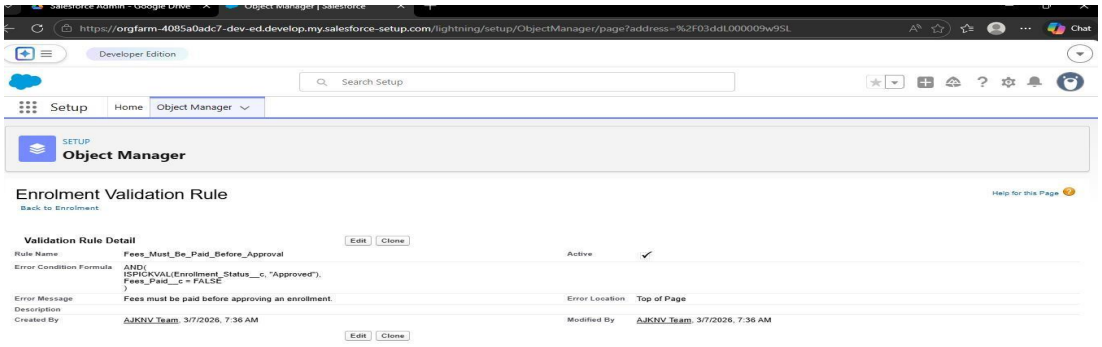
Purpose:
Prevent Enrollment from being approved until fees are paid. Steps:

1. Go to Setup - Object Manager -Enrollment_c.
2. Click Validation Rules - New.
3. Rule Name: Fees_Must_Be_Paid_Before_Approval.
4. Error Condition Formula:

```
AND(
  ISPICKVAL(Enrollment_Status_c, "Approved"),
  Fees_Paid_c = FALSE
)
```

5. Error Message: Fees must be paid before approving an enrollment.
6. Error Location: Top of Page (or field as needed).

Click Save.



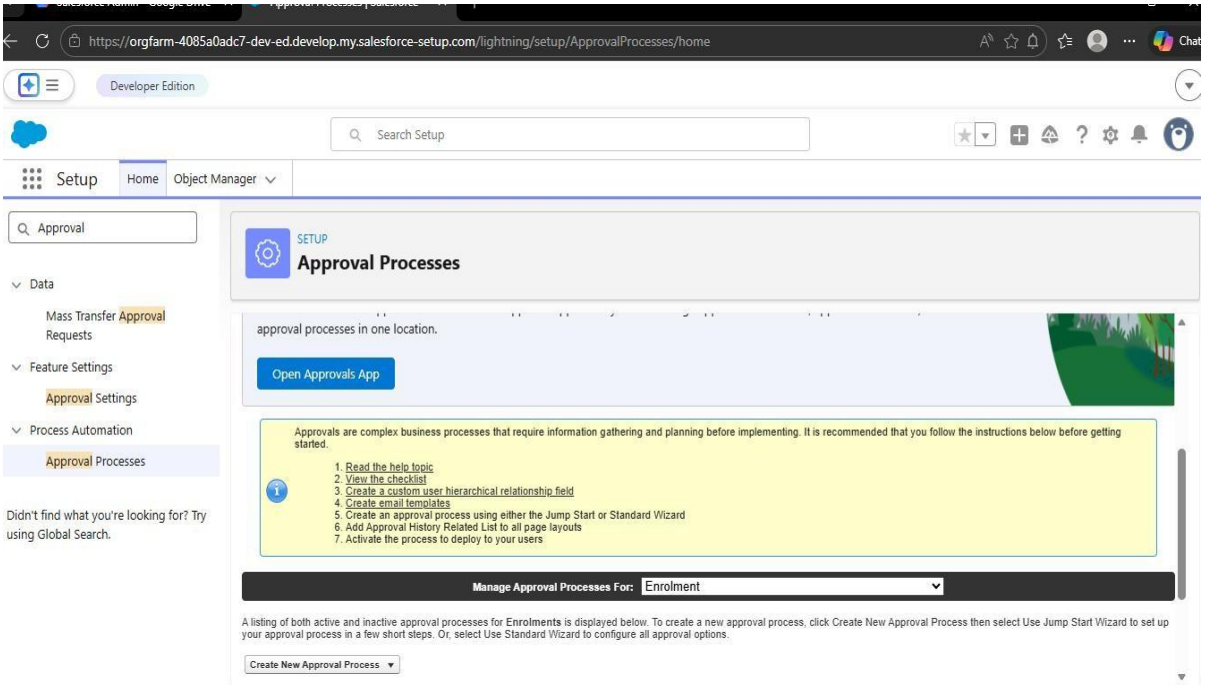
Milestone 6 – Approval Process

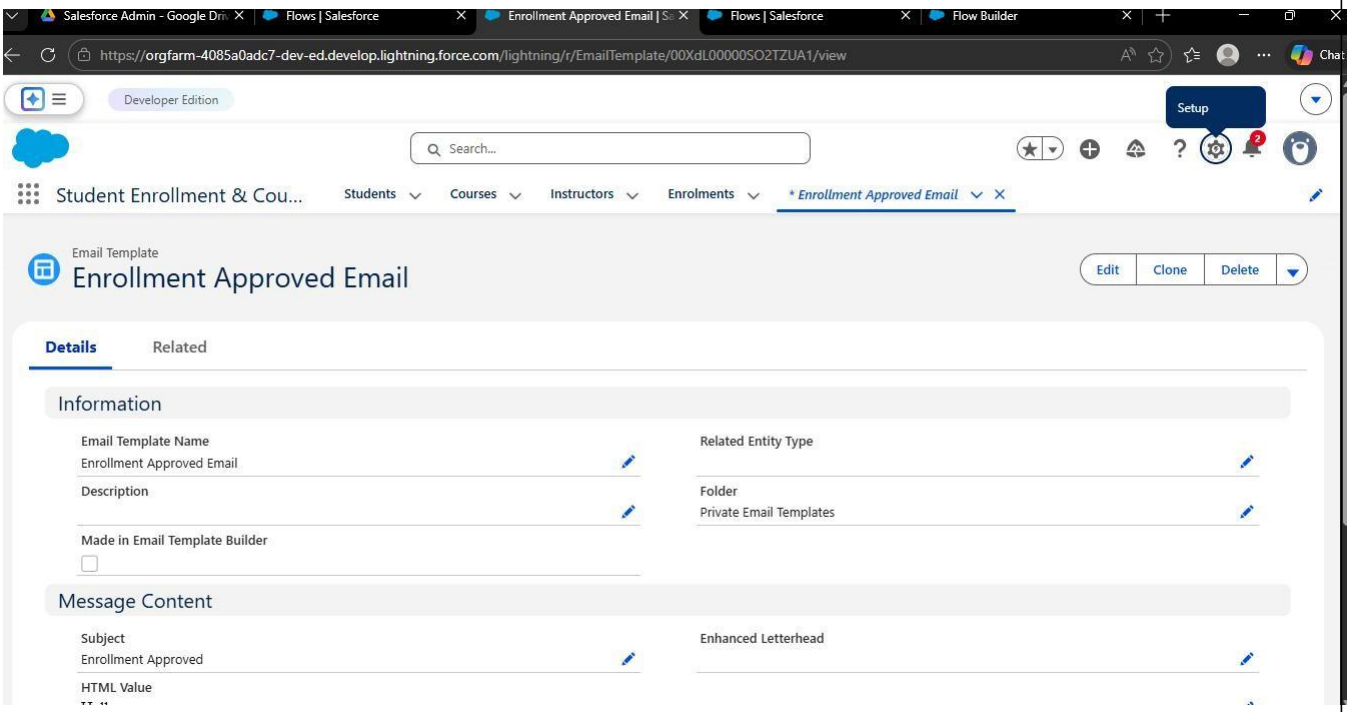
Activity 1: Create Approval Process for Enrollment Requests

Purpose:
Route Enrollment requests to Training Manager for approval or rejection.

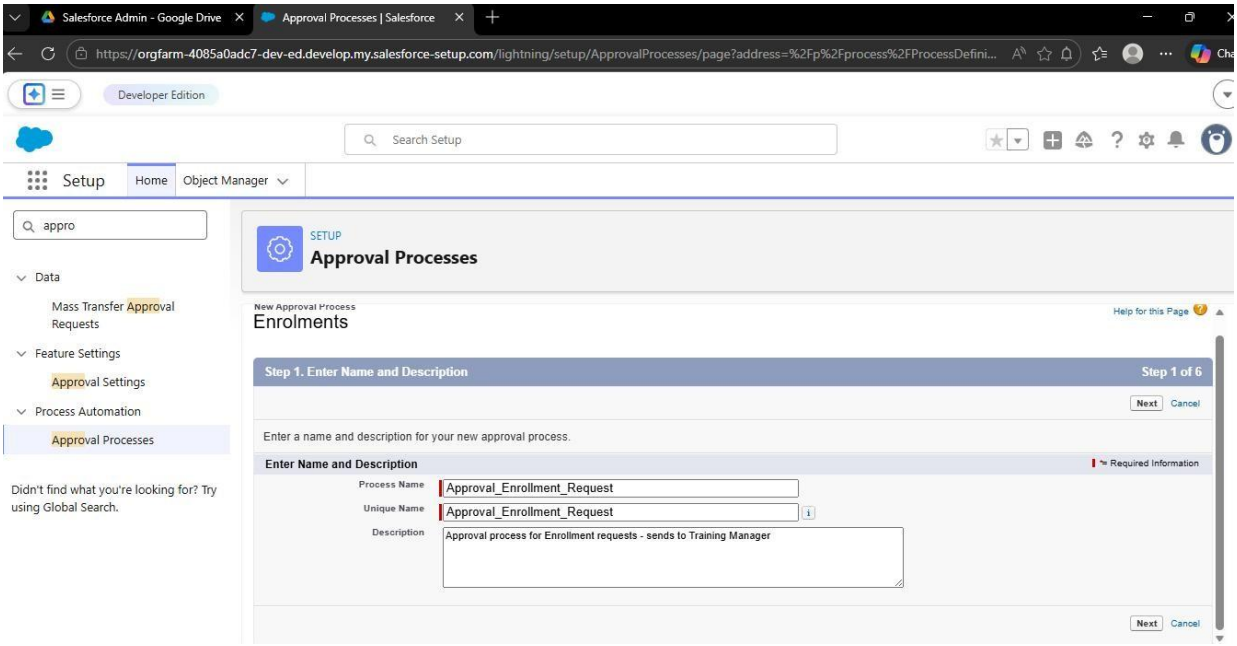
Steps:

1. Go to Setup - Approval Processes - select Enrollment_c.
2. Click Create New Approval Process - Use Standard Setup.
3. Process Name: Approval_Enrollment_Request.
4. Entry Criteria: Enrollment_Status_c = "Requested".
5. Save and configure steps.

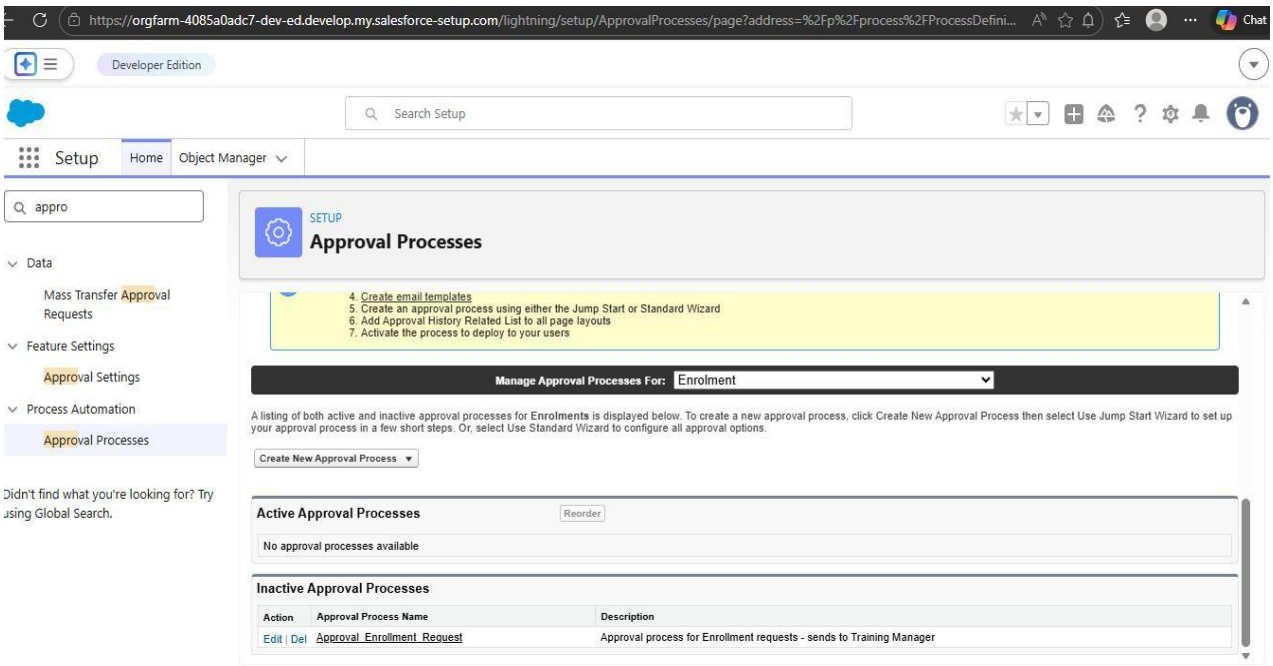


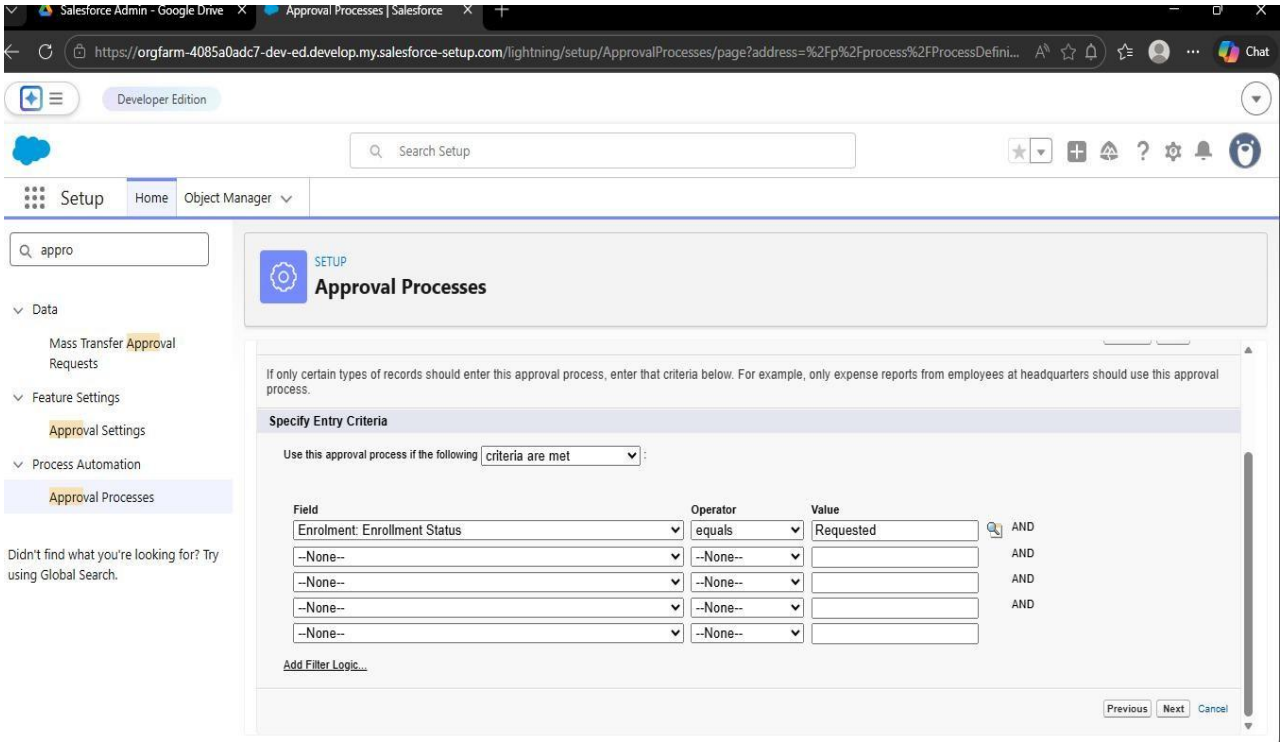


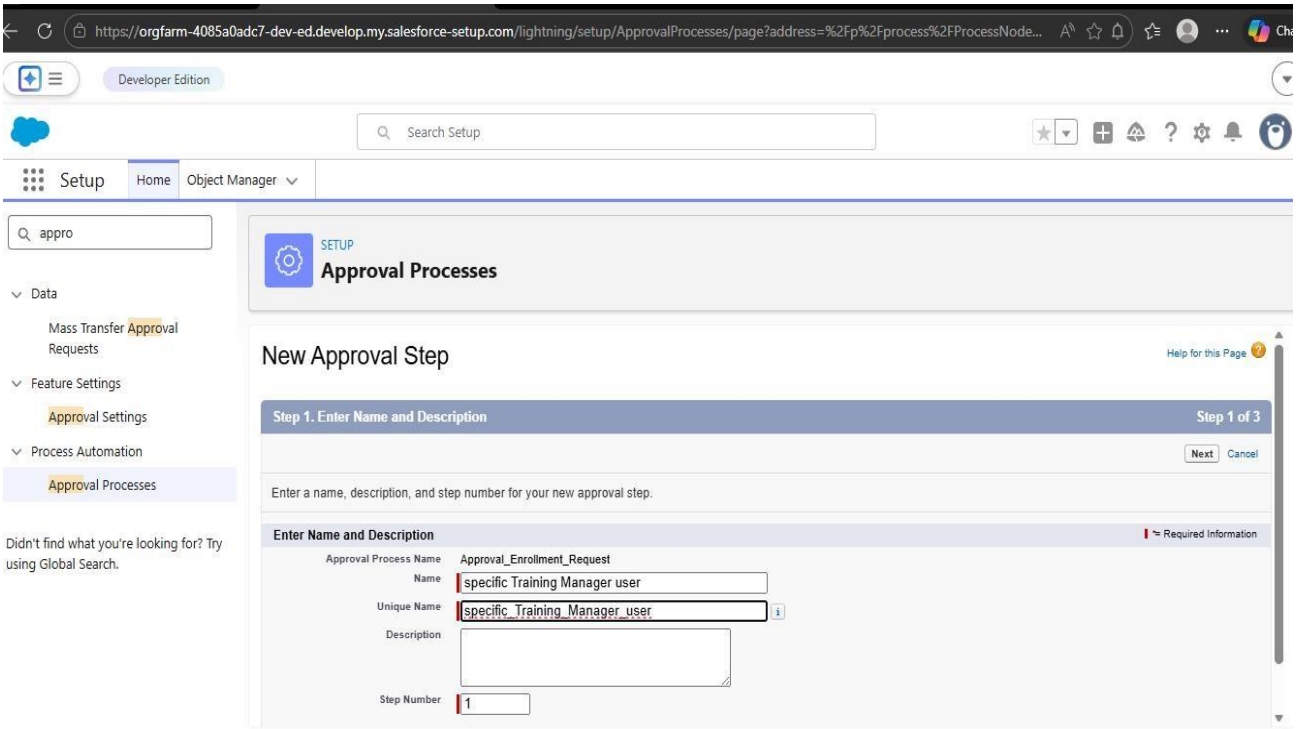
6. Add Approval Step:
7. Approver: specific Training Manager user.



8. Under Final Approval Actions:
9. Add Field Update to set Enrollment_Status_c = "Approved".







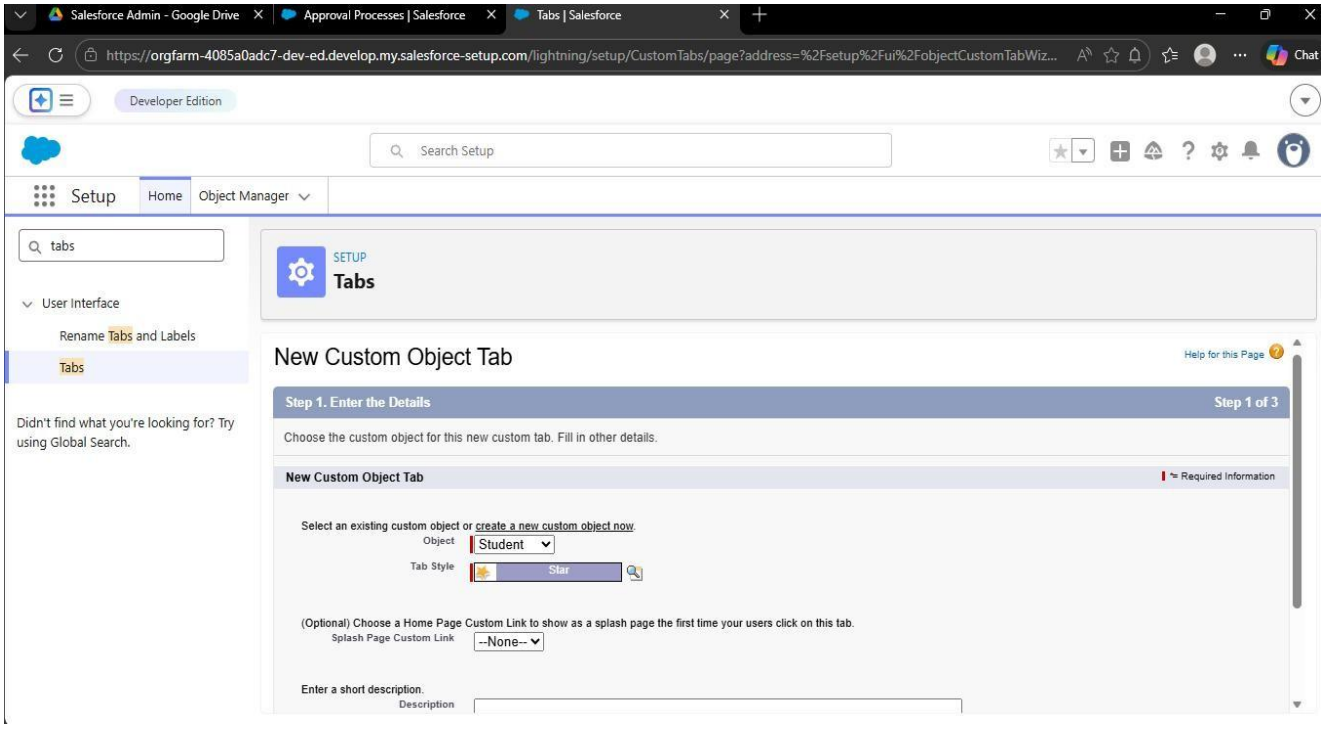
10. Under Final Rejection Actions:
11. Add Field Update to set Enrollment_Status_c = "Rejected".
12. Add Email Alert to send rejection email to student.
13. Activate the approval process.

Milestone 7- Tabs

Activity 1: Creating a Tab for the Student Object:

Go to Setup.

1. In the Quick Find box, type Tabs.
2. Under Custom Object Tabs, click New.Select Student from the object list.
3. Choose a tab style (icon).
4. Click Next, assign it to all profiles, and then click Save.



Activity 2: Creating Remaining Tabs

Now create the Tabs for the remaining Objects, they are "Courses, Instructors, Enrollment".
Follow the same steps as mentioned in Activity -1

Milestone 8 - The Lightning App

Activity 1: Creating the Lightning Application for the Project

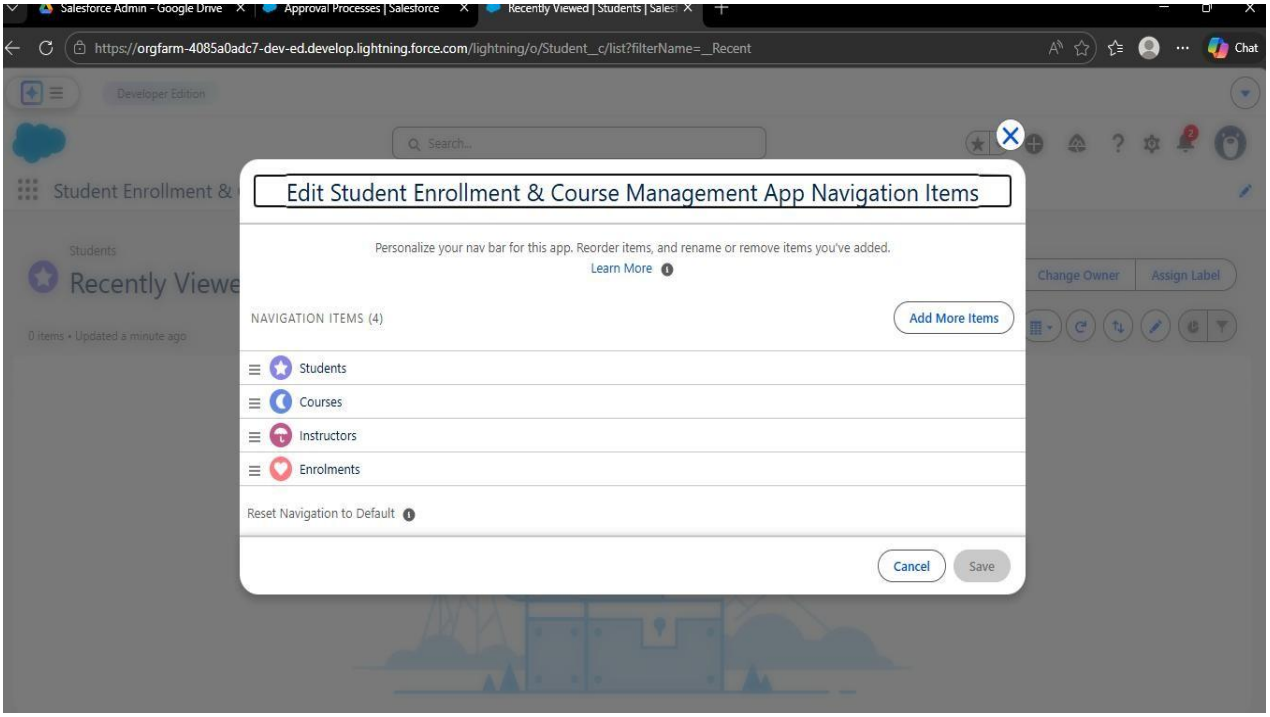
Navigate to Setup.

Enter App Manager in the Quick Find search box.
Click New Lightning App.

Provide the app details:
App Name: Student Enrollment & Course Management
Developer Name auto-fills
Description: Optional, but can describe the purpose of the app
Click Next and choose the following settings:
App Branding (optional): Add logo or select color theme
Navigation Style: Choose Standard Navigation
Click Next and assign the app to specific profiles (e.g., **Admin, Enrollment Officer, Instructor**).
Click Next to select the items (tabs) to be included in the app. Add:

1. Student
2. Course
3. Instructor
4. Enrollment
5. Reports
6. Dashboards
7. Home
8. Tasks

Click Next and review the app settings.
Finally, click Save & Finish.



Milestone 9 – Page Layouts and Record:

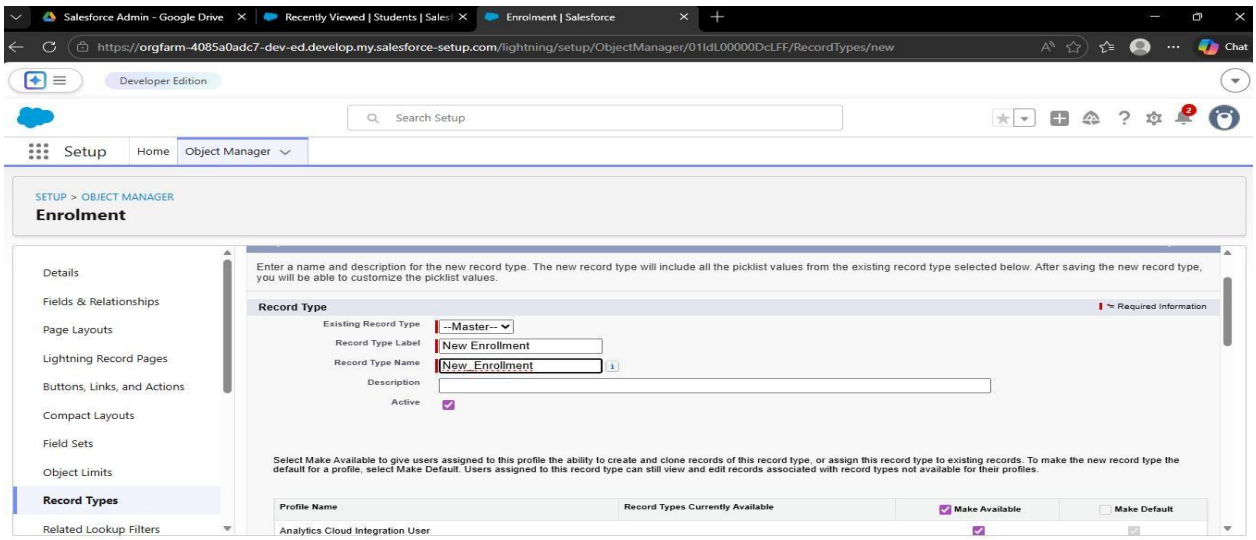
Activity 1: Create Record Types for Enrollment:

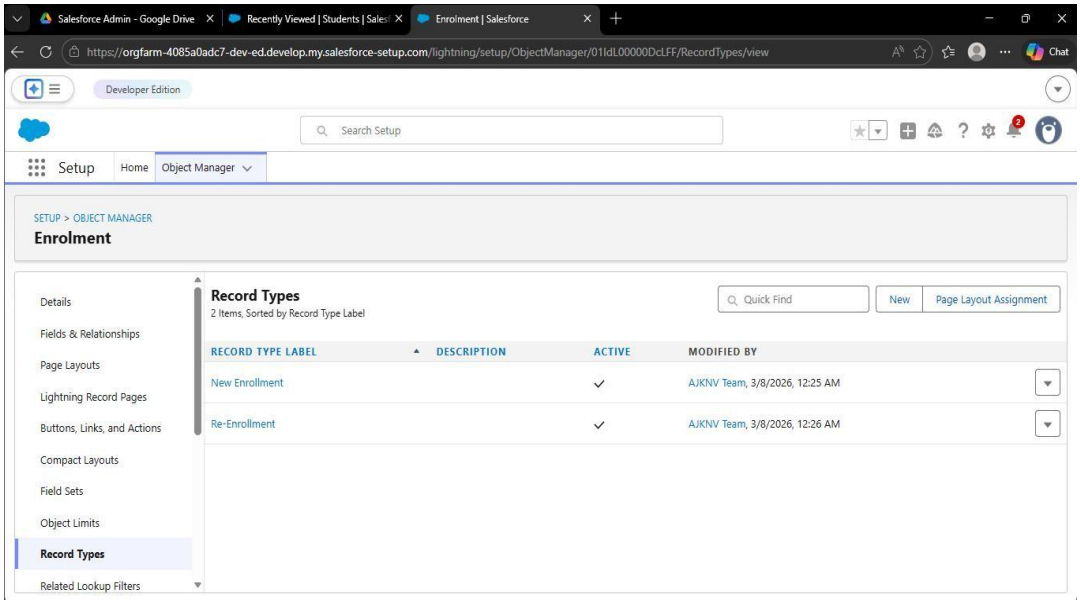
Purpose:

To separate New Enrollment vs Re-Enrollment processes.

Steps: Go to Setup - Object Manager - Enrollment_c.

1. Click Record Types - New.
2. For the first record type:
   - Existing Record Type: Master
   - Record Type Label: New Enrollment
   - Enable for required profiles (Admin, Enrollment Officer).
   - Select the default Page Layout - Save & New.
3. For the second record type:
   - Record Type Label: Re-Enrollment
   - Enable for same profiles.
   - Select the default Page Layout - Save.

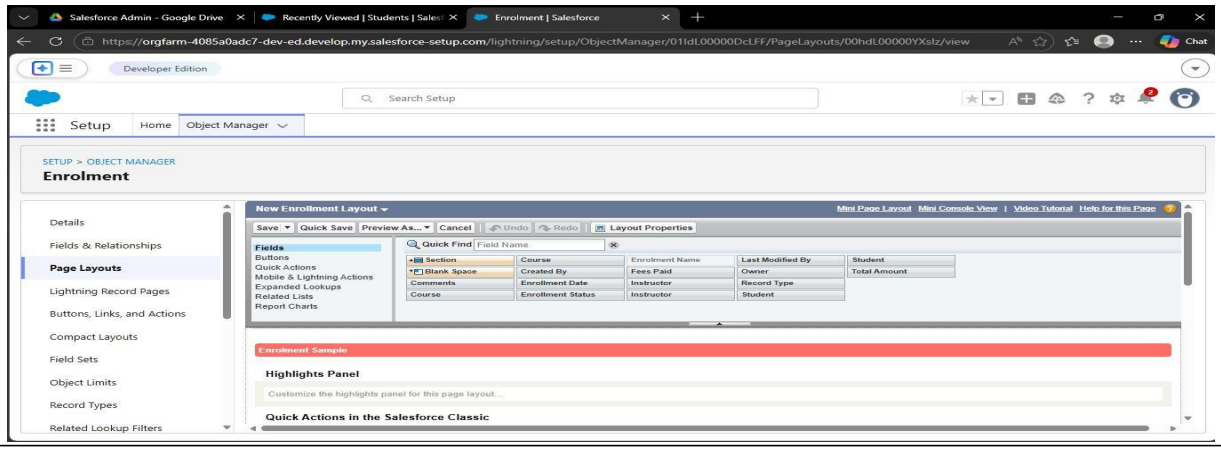




Activity 2: Separate Page Layout Creates for Each Enrollment Record Type

Purpose:
To show different fields for New Enrollment vs Re-Enrollment. Steps:

1. Enrollment_c object - click Page Layouts.
2. Click New to create a layout for New Enrollment:
   - Clone from existing Enrollment Layout - name it New Enrollment Layout - Save.
   - Keep fields relevant for first-time enrollment: Student, Course, Instructor, Enrollment Date, Status, Fees, etc.
   - Remove unnecessary re-enrollment fields if any.
   - Click Save.



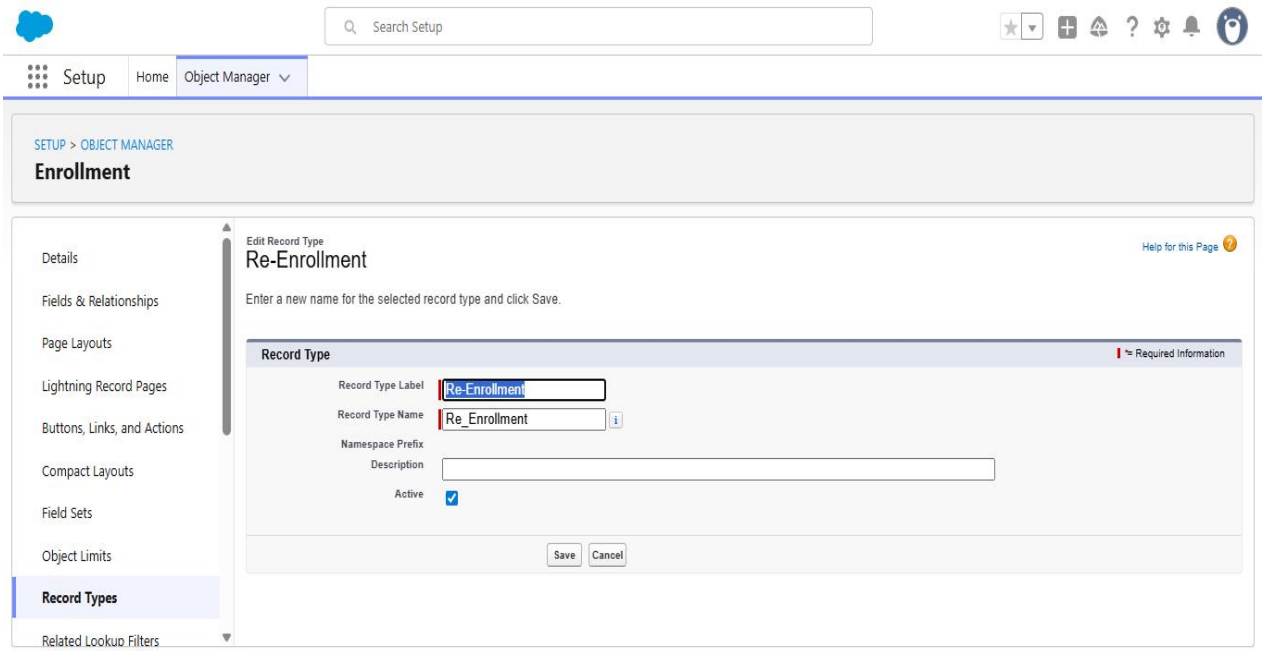
3. Again, click New to create Re-Enrollment Layout:

- Clone existing layout - name it Re-Enrollment Layout - Save.
- Include fields like previous Enrollment reference (if any), Re-Enrollment Reason, Status, Fees, etc.

4. Click Save.
5. Click Page Layout Assignment - Edit Assignment.
6. For each profile and record type:

- New Enrollment - use New Enrollment Layout.

6.Re-Enrollment - use Re-Enrollment Layout.
Click Save.



Activity 3: Enrollment Related Lists to Parent Objects:

Purpose:

To see all Enrollments from Student, Course, and Instructor records.

a) Student - Enrollment Related List

Go to Setup - Object Manager → Student_c. Click

Page Layouts - open the main layout.

In the palette, select Related Lists.

Drag Enrollments related list onto the layout.

Customize columns if needed -Save.

b) Course - Enrollment Related List

Go to Object Manager - Course_c - Page Layouts. Open

layout - add Enrollments related list.

Save.

c) Instructor - Enrollment Related List

Go to Object Manager - Instructor_c - Page Layouts. Open

layout -add Enrollments related list.

Save.

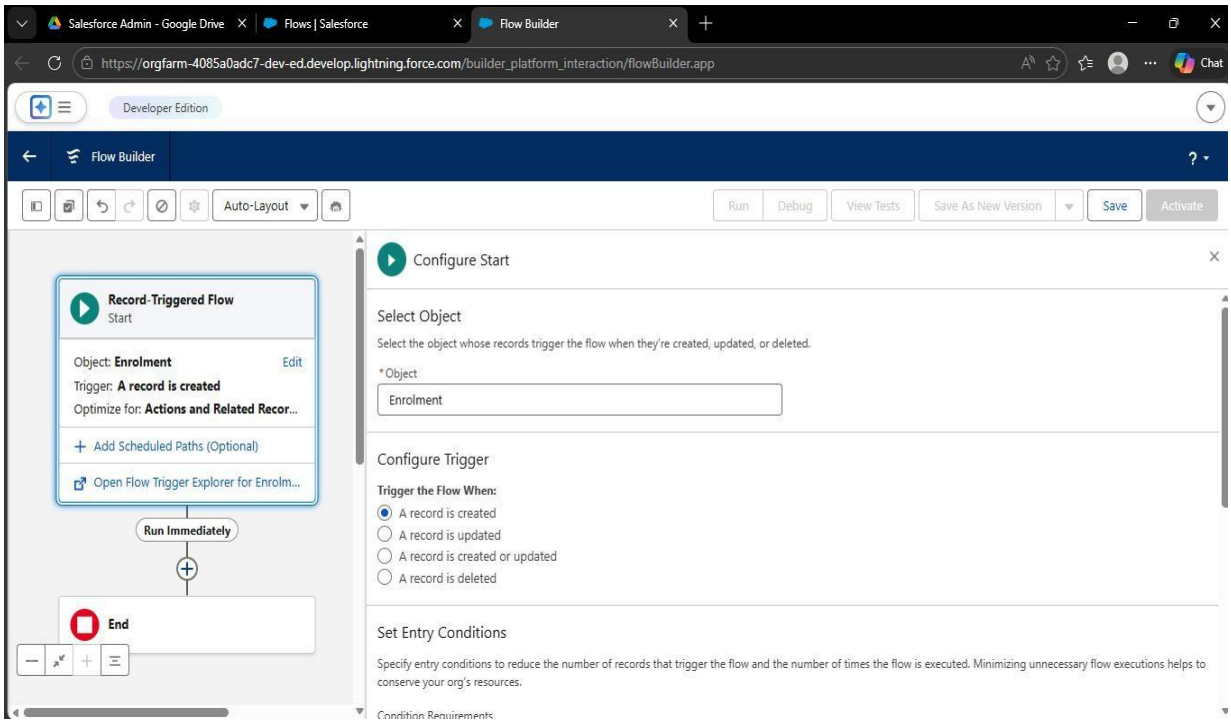
Milestone 10 – Automation with Flow

Activity 1: Auto-Populate Enrollment Date (Record-Triggered Flow)

Purpose:
Set Enrollment_Date____c to today when Enrollment is created.

Steps:

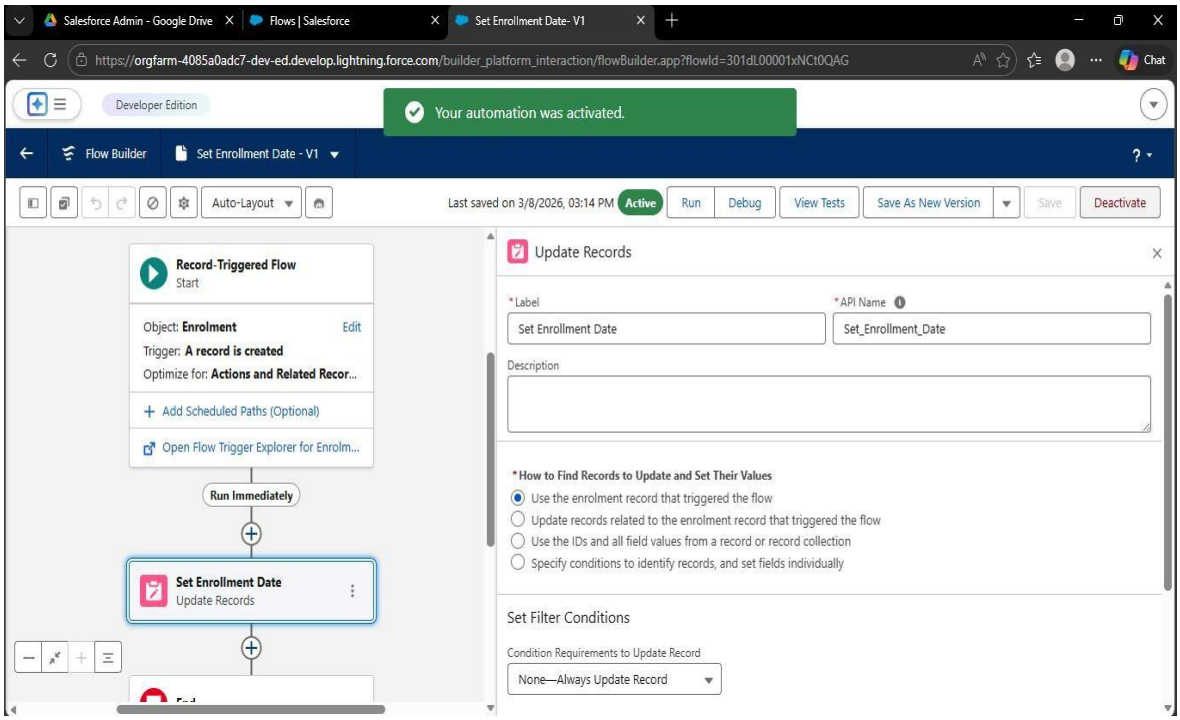
1. Go to Setup - Flows - New Flow.
2. Select Record-Triggered Flow - Create.
3. Object: Enrollment____c.
4. Trigger: A record is created.
5. Optimize for Actions and Related Records - Done.



6. Add Update Records element:

- Label: Set Enrollment Date.
- Use record that triggered the flow.
- Field: Enrollment_Date_c - Value: $Flow.CurrentDate.

7. Save as SetEnrollmentDate - Activate.

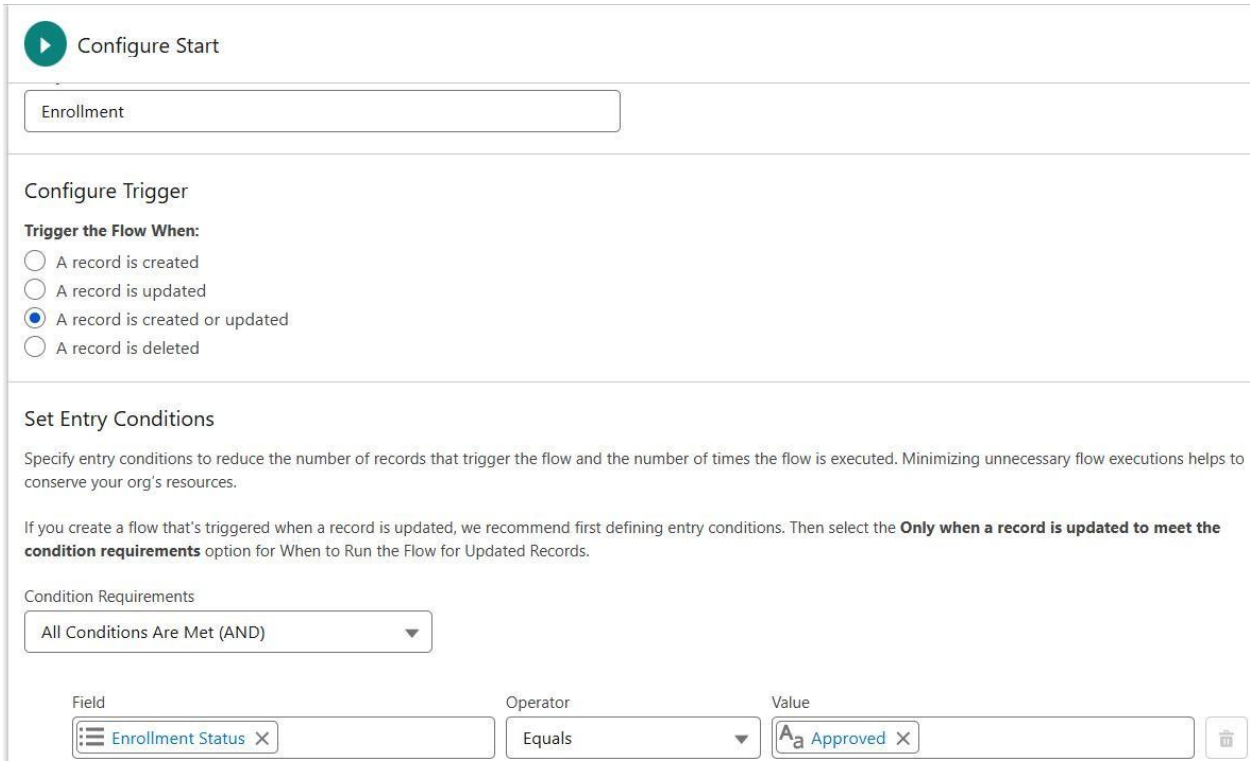


Activity 2: Send Email When Enrollment Approved

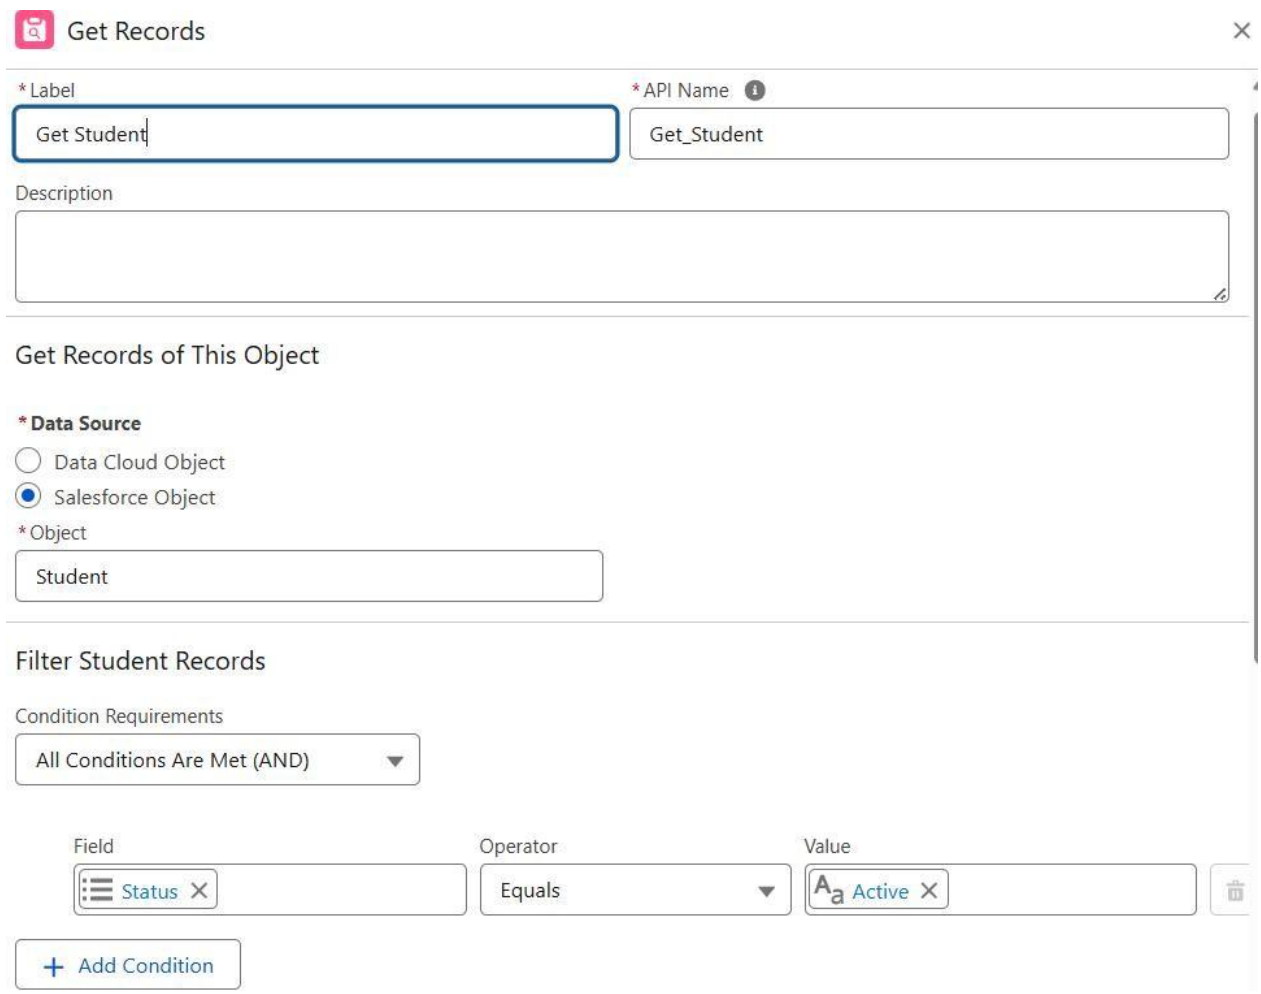
Purpose:
When Enrollment_Status_c = Approved, send email, alert admin, and set Student to Active.
Steps (high level for document):

1. Create Email Template and Email Alert for student notification.
2. Go to Flows - New - Record-Triggered Flow.
3. Object: Enrollment_c, Trigger on update.
4. Condition: Enrollment_Status_c Equals "Approved".

5. Go to Flows - New - Record-Triggered Flow.
6. Object: Enrollment_c, Trigger on update.
7. Condition: Enrollment_Status_c Equals "Approved".



8. Add Get Records to fetch related Student_c.



9. Add Action (Email Alert) to send email to student.

Enrollment Approved EmailAlert

* Label

Send Student Email

* API Name

Send_Student_Email

Description

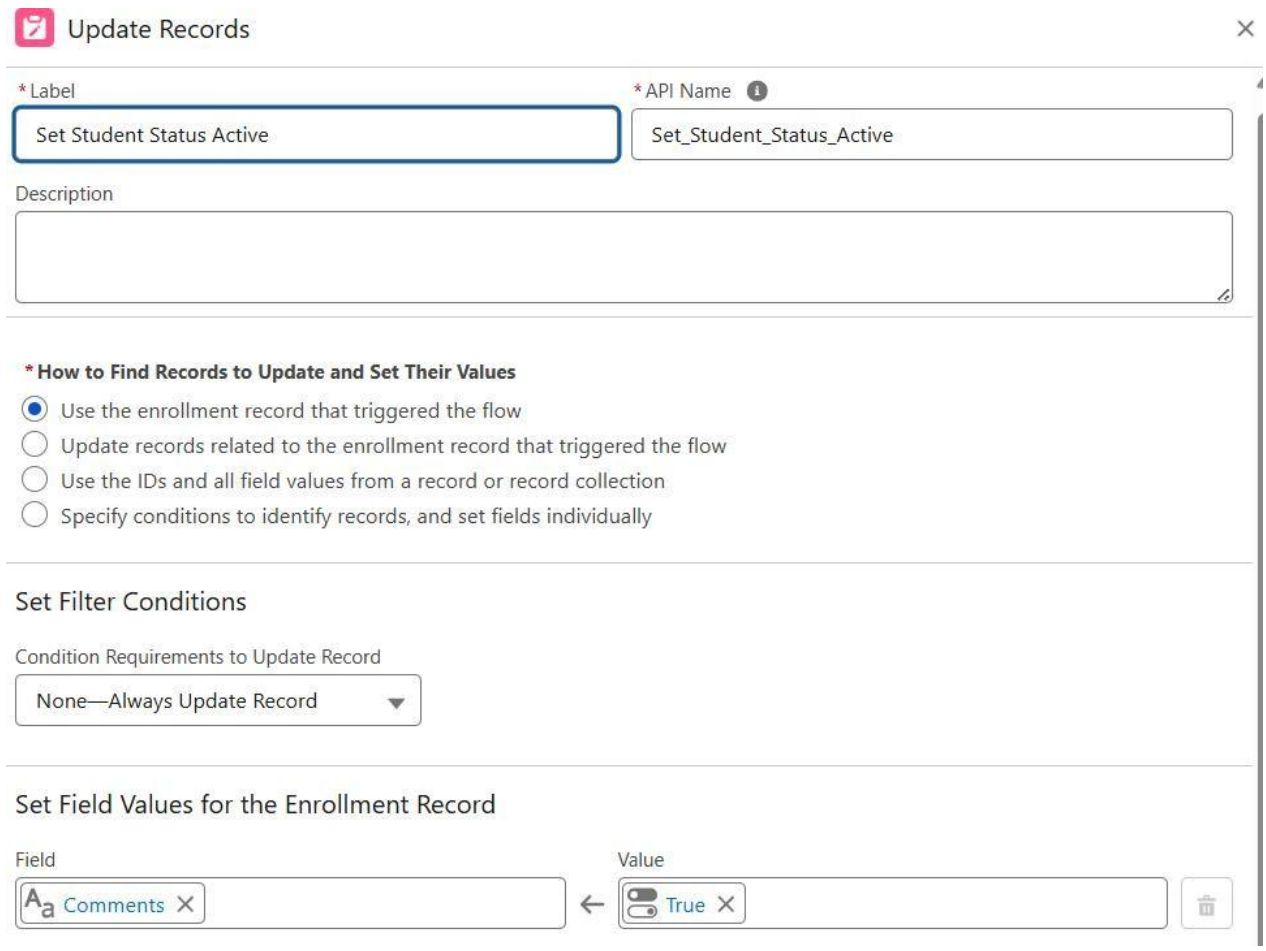
Use values from earlier in the flow to set the inputs for the "Enrollment Approved EmailAlert" email alert. To use its outputs later in the flow, store them in variables.

Set Input Values

* Record ID

Triggering Enrolement__c > Record ID

10. Add Action to notify Admin if needed.
11. Add Update Records to set Student_c.Status_c = "Active".



12. Save as Enrollment Approved Action - Activate.

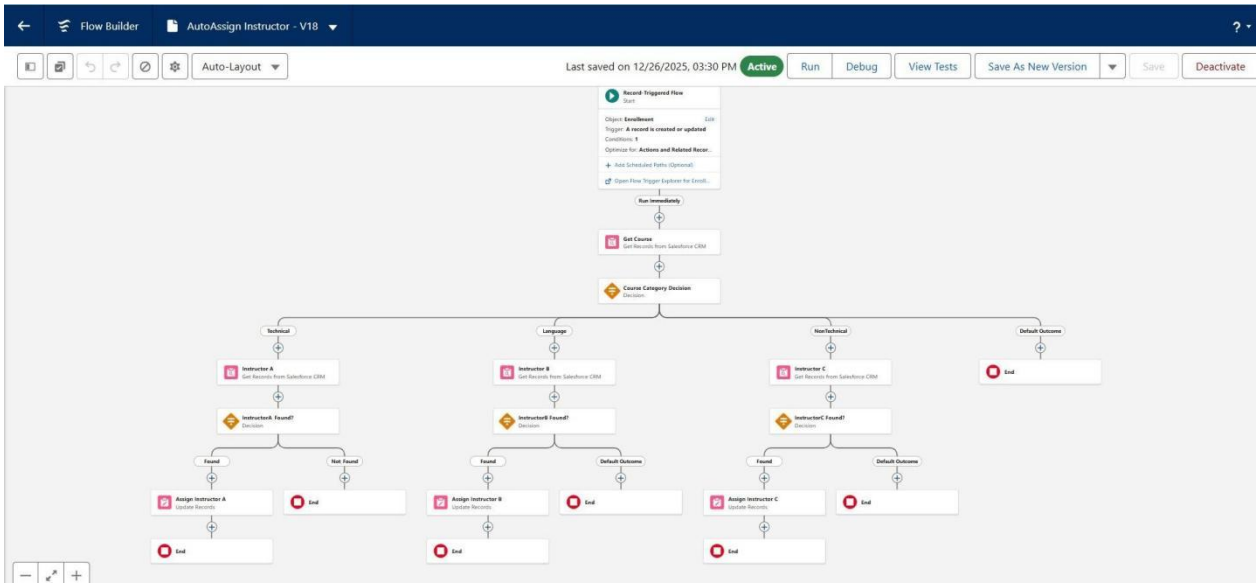
Activity 3: Auto-Assign Instructor Based on Course Category

Purpose:
Assign Instructor automatically based on Course category. Rules:

Technical = Instructor A
Language = Instructor B
Non- Technical = Instructor C

Steps:

1. Prepare Instructor_c records with codes (e.g., INSTR_A, INSTR_B, INSTR_C).
2. Create Record-Triggered Flow on Enrollment_c (created/updated).
3. Add Get Records to fetch related Course_c.
4. Add Decision element on Course_r.Category_c:
5. Technical / Language / Non-Technical outcomes.
6. For each outcome:
7. Get Instructor record (A/B/C) based on code or name.
8. Update Records: set Instructor_c = Get_Instructor_X.Id.
9. Save as Auto-assign_Instructor -Activate.

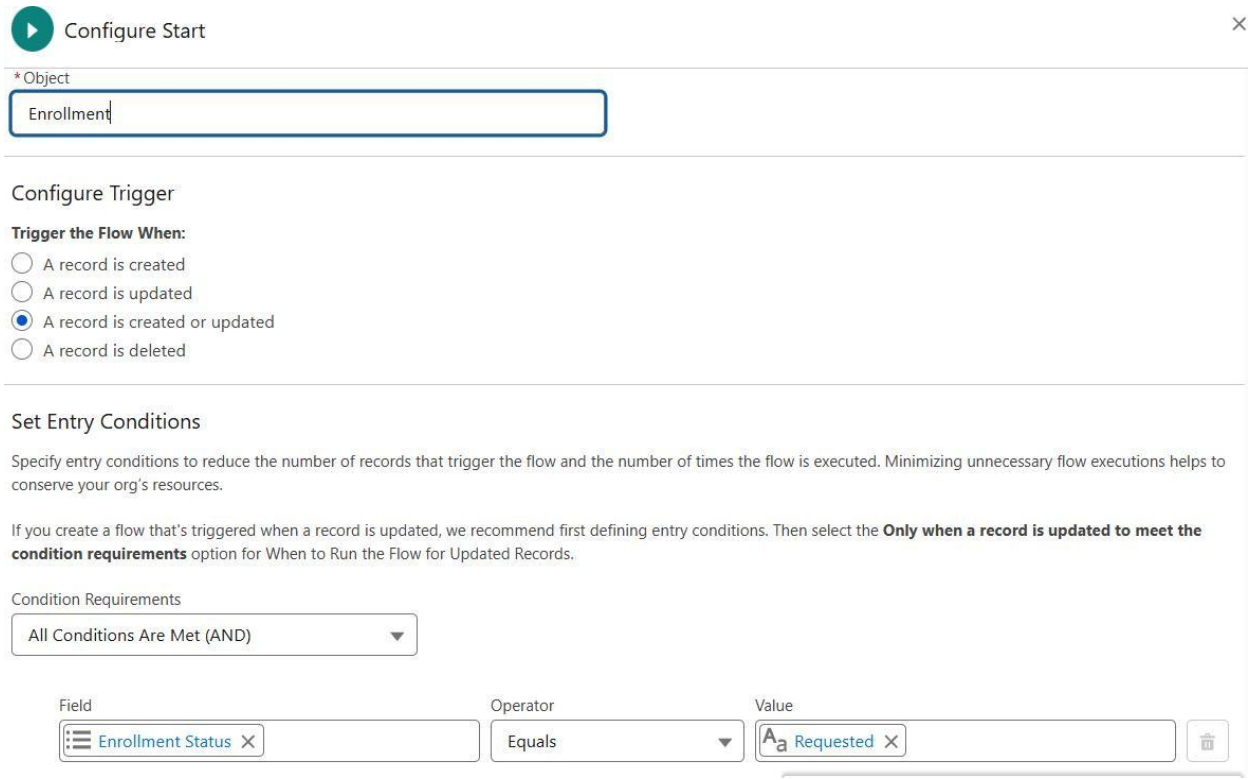


Activity 4: Auto-Create Task for Follow-Up

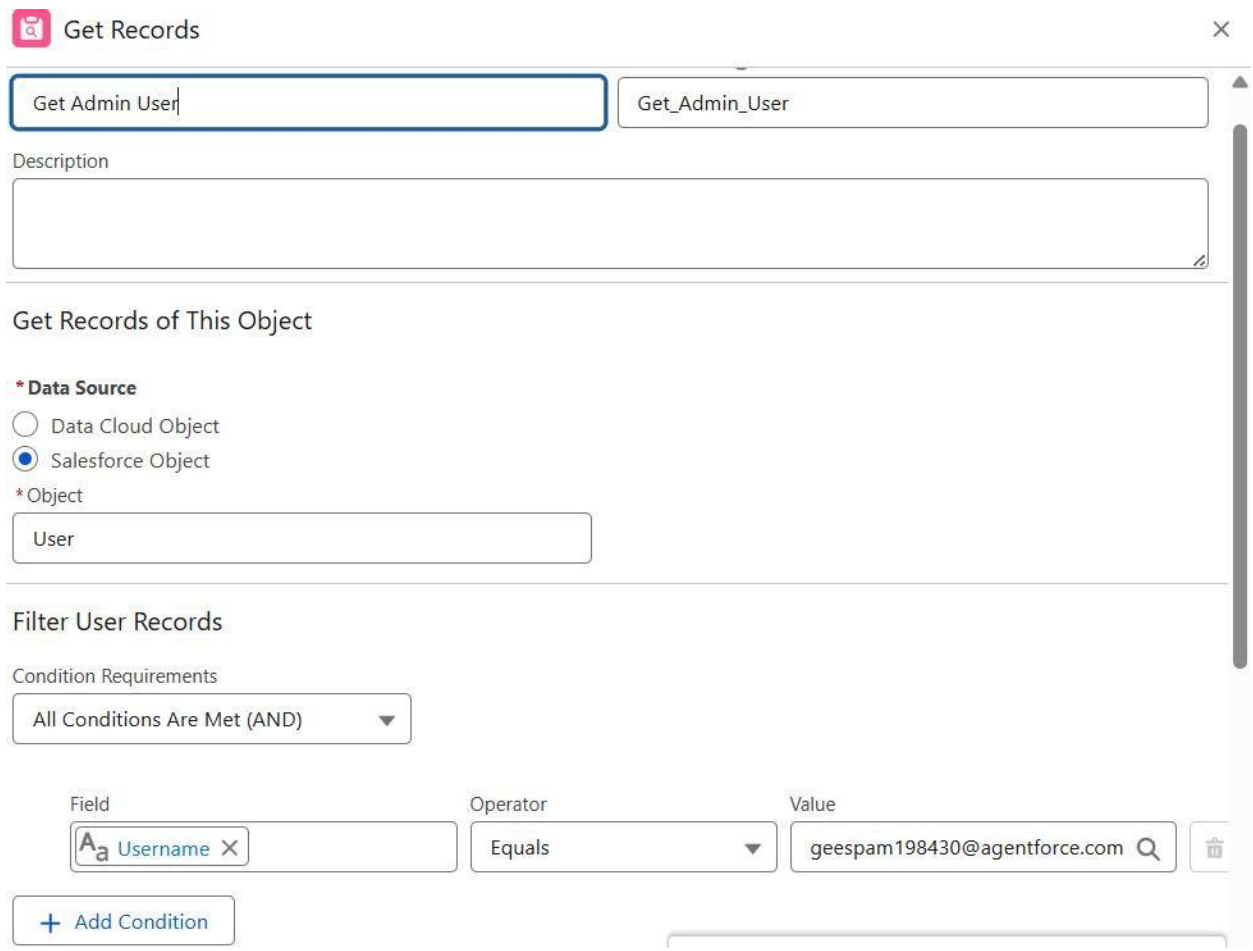
Purpose:
When Enrollment is “Requested”, create a follow-up task for Admin.

Steps:

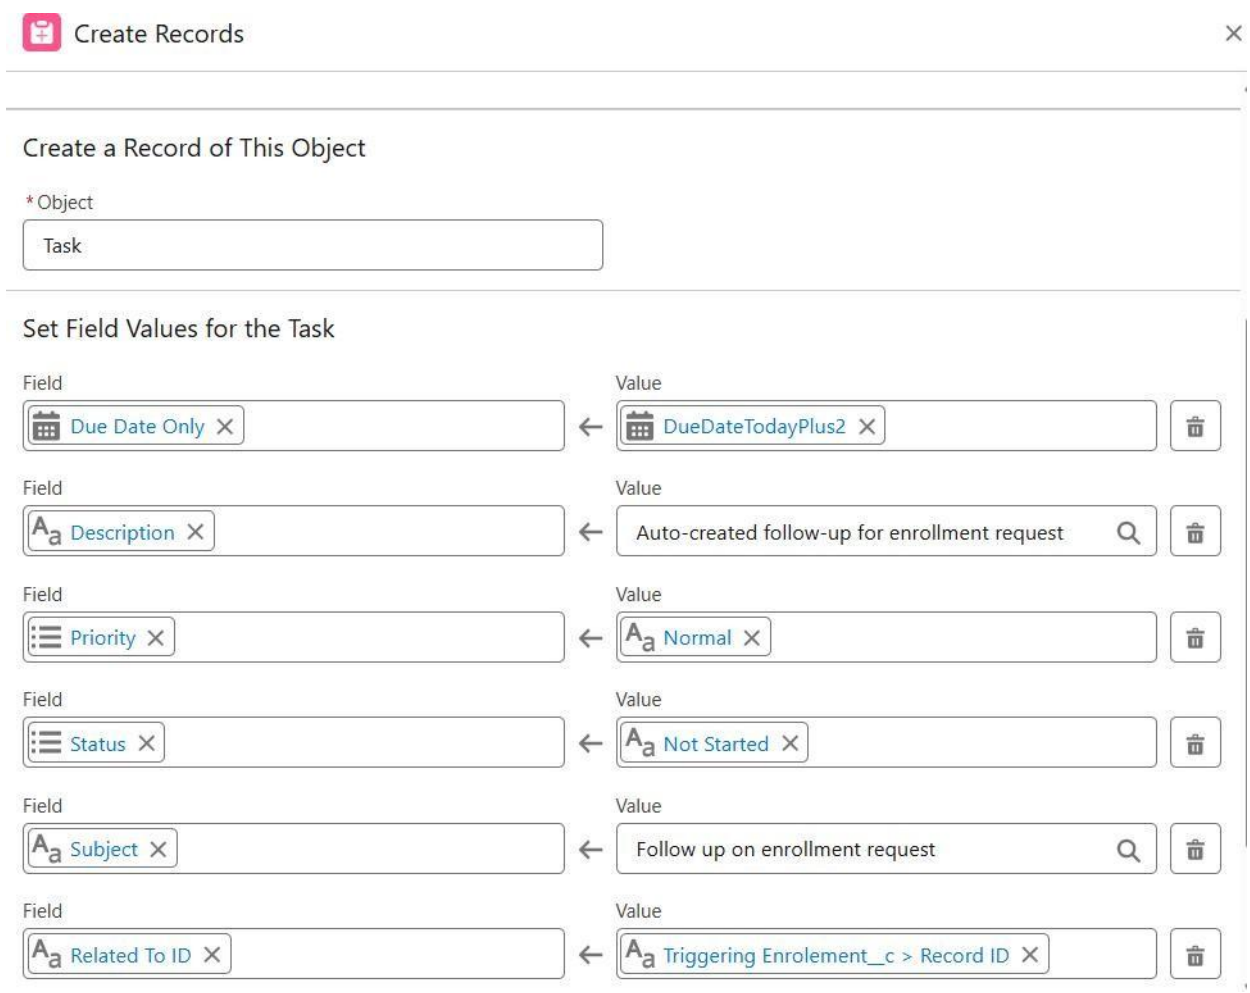
1. Create Record-Triggered Flow on Enrollment_c.
2. Trigger: Record created or updated; condition Enrollment_Status_c = "Requested".



3. Add Get Records to fetch Admin user (by Username / Profile).
4. Add Formula (Date): TODAY() + 2 for due date.



5. Add Create Records for Task:
6. Subject: Follow up on enrollment request.
7. OwnerId: Admin user Id.
8. What Id: Enrollment Id.
9. ActivityDate: formula Today + 2.

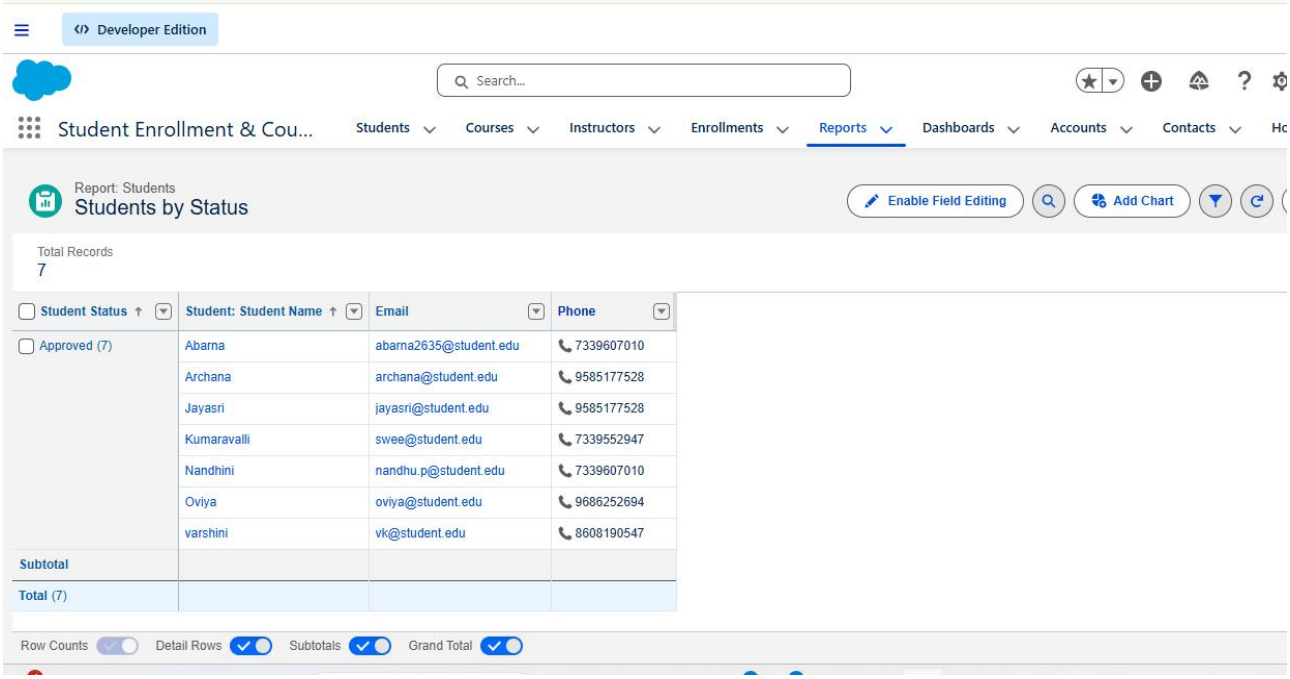


10. Save as Create_Followup_Task - Activate.

Milestone 11 – Reports:

Activity 1: Create "Students by Status" Report

1. Go to **Reports -New Report**.
2. Report Type: Students.
3. Group rows by Status_c.
4. Add columns as needed (Name, Email, Phone).
5. Save as Students by Status.

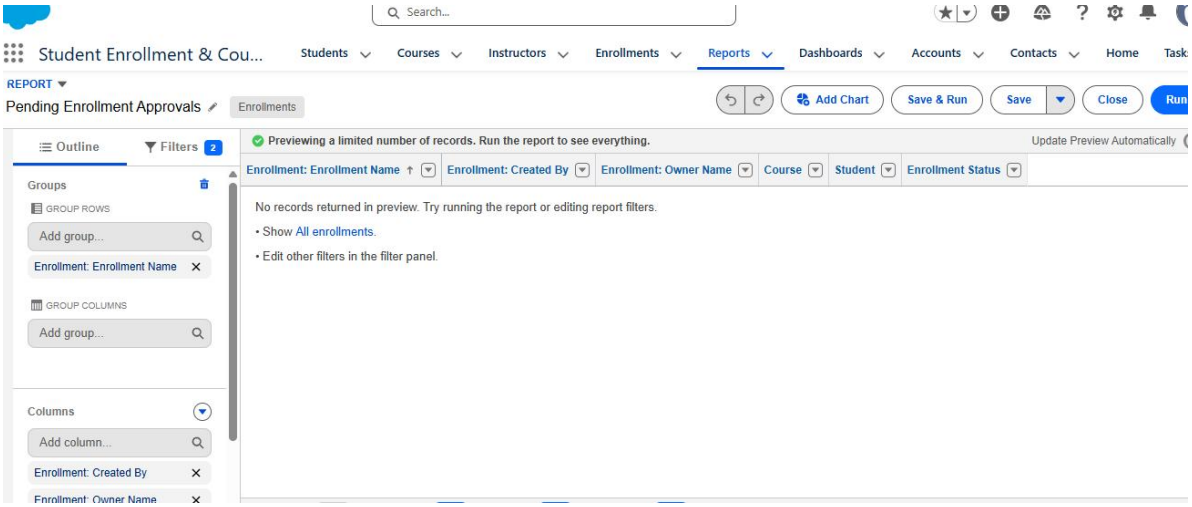


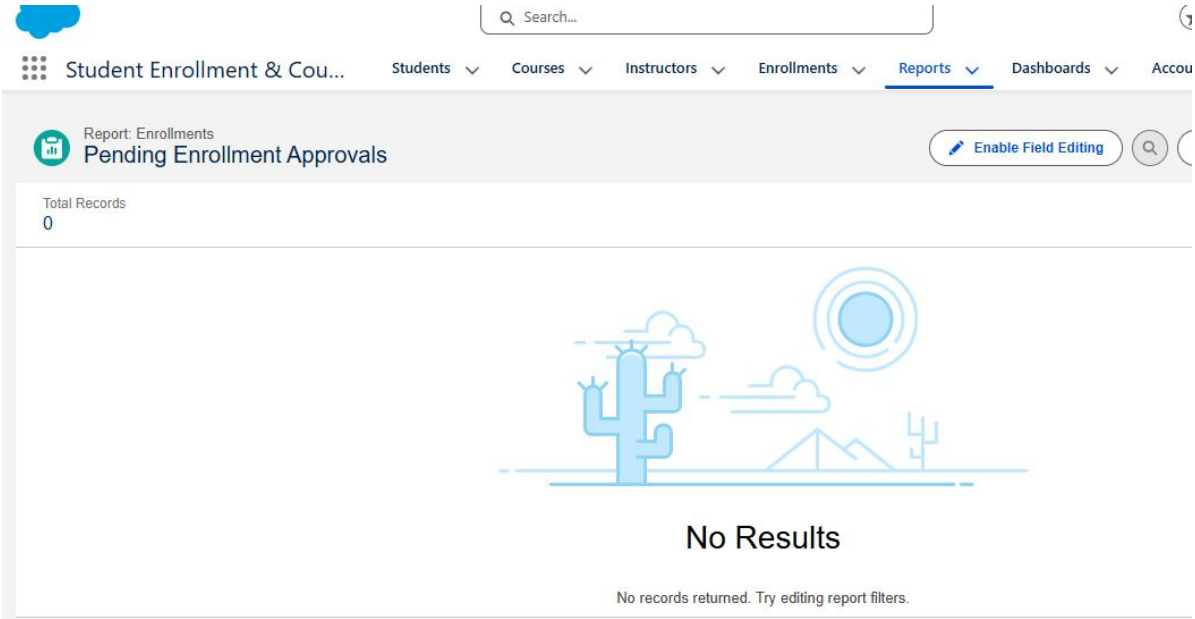
Activity 2: Create "Enrollments by Course" Report

1. New Report - Report Type: Enrollments.
2. Group rows by Course_r.Name.
3. Show Record Count per course.
4. Save as Enrollments by Course.

Activity 3: Create “Pending Enrollment Approvals” Report

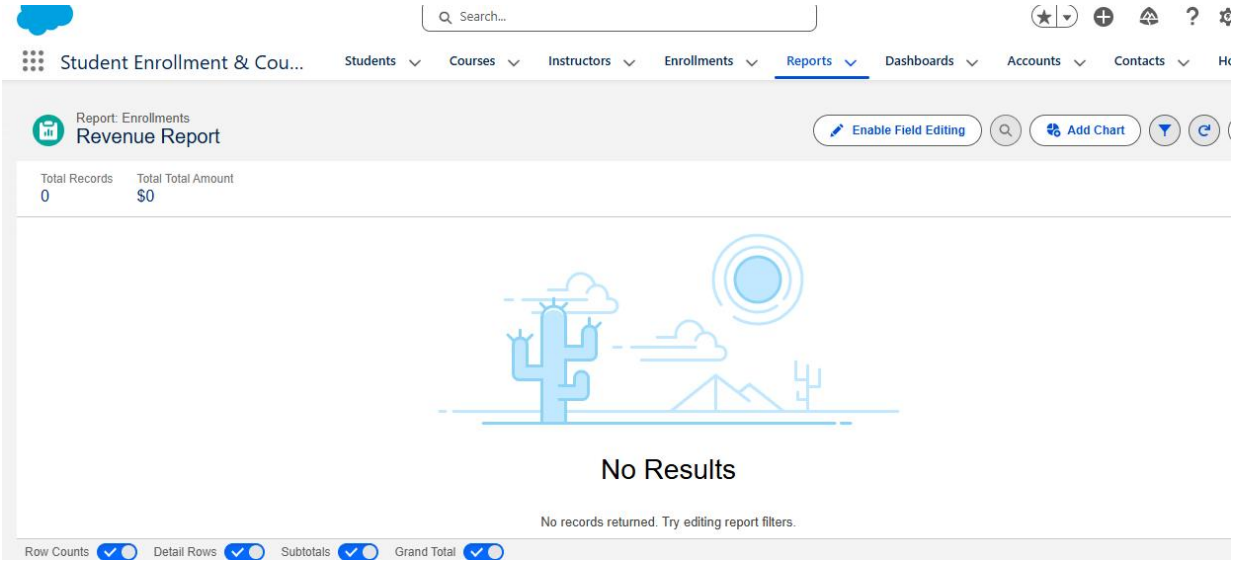
1. New Report - Enrollments report type.
2. Filter: Enrollment_Status_c = "Requested".
3. Add columns (Student, Course, Owner, Created Date).
4. Save as Pending Enrollment Approvals.

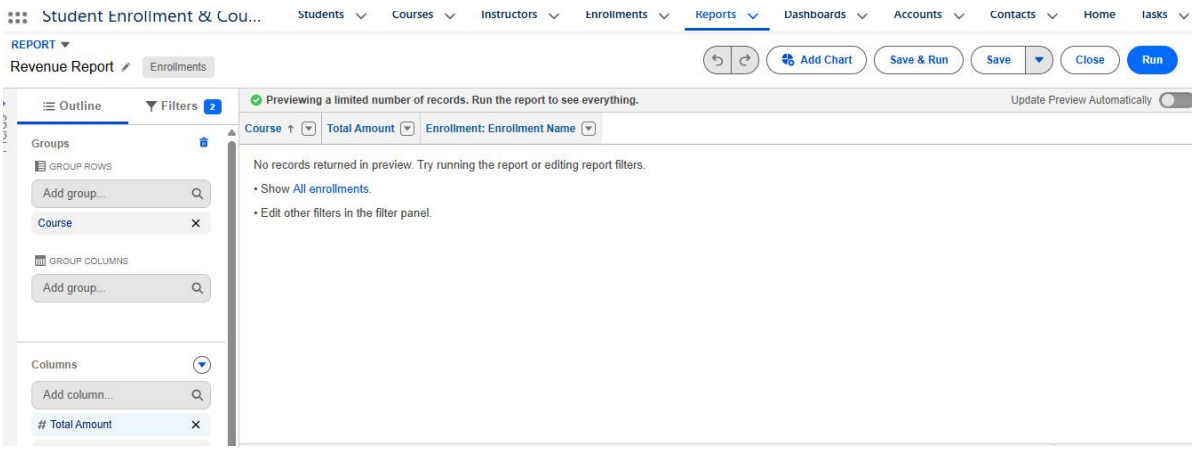




Activity 4: Create “Revenue Report (Fees Paid)” Report

1. New Report -Enrollments report type.
2. Filter: Fees_Paid_c = TRUE.
3. Group by Course_r.Name.
4. Summarize Course_Fee_c or similar fee field.
5. Save as Revenue Report – Fees Paid.





Milestone 12 – Dashboards:

Activity 1: Create “Student Managemet Dnashboard”

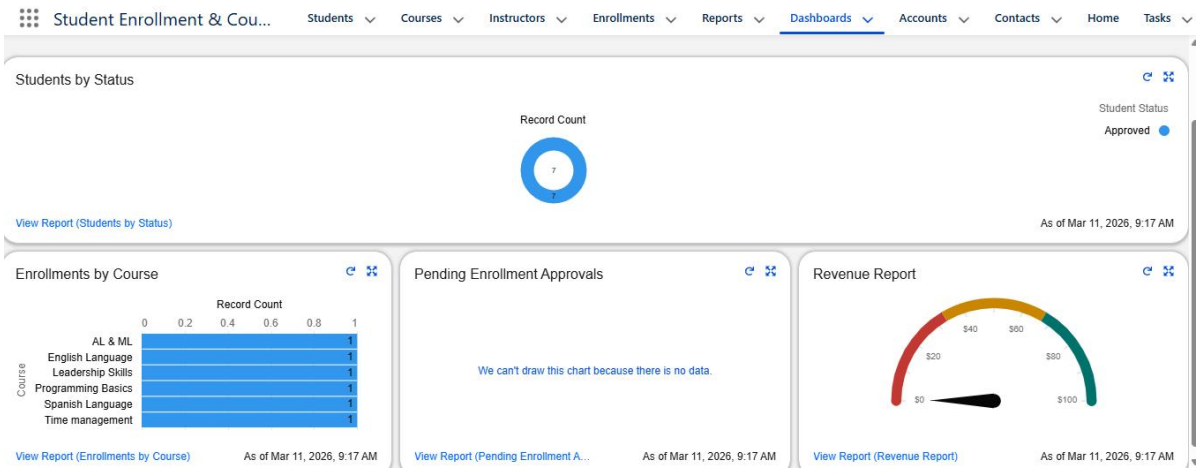
Steps:

1 . Go to **Dashboards - New Dashboard**.
2 . Name: Student Management Dashboard.

3 . Select folder - **Create**.
4 . Select new Dashboard folder and Save.

Add components:

- **Donut Chart -** using Students by Status report.
- **Bar Chart -** using Enrollments by Course report.



- **Gauge -**using Revenue Report – Fees Paid (sum of revenue field).
- **Table** -using Pending Enrollment Approvals report.

5 **.** Arrange components on canvas.

Click **Save → Done**.

Milestone 13 – Security Setup

Activity 1: Configure Profiles

1 **.** Go to **Setup - Profiles - New** (or Clone-profiles **Required:**

- **Admin** – Full access.
- **Enrollment Officer** – Create/Update Enrollments.
- **Instructor** – Read-only access to assigned Enrollments.

2. **Steps (example for Enrollment Officer** fName: Enrollment Officer.
3. In **Object Settings**:
    - Enrollment_c: Read, Create, Edit.
    - Student_c / Course_c: Read (and Edit if required).
4. Save.

Repeat similarly for **Instructor** profile with **Read-Only** on Enrollments

Activity 2: Create Permission Sets

1. Go to **Setup - Permission Sets - New**.
2. Create Custom Object Access (additional access to project objects if needed).
3. Create Dashboard Editor (Create/Customize Reports & Dashboards permissions).
4. Assign to relevant users.

Activity 3: Configure Sharing & OWD

Steps:

1. Go to **Setup - Sharing Settings**.
2. Set **Organization-Wide Defaults**:

- **Students (Student__c):** Public Read/Write.
- **Courses (Course__c):** Public Read/Write.
- **Enrollments (Enrollment__c):** Private.

3. Save.

For Insinstructor access to assigned Enrollments, optionally:

- Add a **User lookup** on Enrollment (Instructor User).
- Use a simple **Record-Triggered Flow** to set Owner-id = **Instructor User** so they can see only their own records.

7. FUNCTIONAL & PERFORMANCE TESTING

During the testing stage, multiple tests were carried out within the Salesforce environment to confirm that all modules of the Student Enrollment and Course Management System were operating correctly. Test cases included the creation and modification of student, course, instructor, and enrollment records. Validation rules were tested to ensure mandatory fields such as student details, course information, and enrollment dates were properly enforced.

Automation features like flows and approval processes were also tested to confirm that enrollment requests were processed automatically and notifications were triggered when required. The system's reporting and dashboard components were verified to ensure accurate representation of enrollment statistics, instructor assignments, and course availability.

Performance testing was conducted by entering multiple records to evaluate system responsiveness and data processing efficiency. Screenshots were taken during each stage of testing as evidence of system functionality and successful implementation.

8. ADVANTAGES & DISADVANTAGES

Advantages:

- Centralized management of student and course data.
- Automated enrollment and approval processes.
- Improved data accuracy through validation rules.
- Easy tracking of courses, instructors, and enrollments.
- Real-time reports and dashboards for monitoring.

Disadvantages:

- Dependence on the Salesforce platform.
- Requires initial setup and configuration effort.
- Users may need training to understand the system.
- Customization may require technical knowledge.

9. Conclusion:

The Salesforce-based Student Enrollment and Course Management System provides an efficient solution for managing academic activities digitally. The system integrates student records, course details, instructor information, and enrollment processes into a single platform, reducing manual work and improving overall efficiency.

By utilizing Salesforce features such as validation rules, automation flows, reports, and dashboards, the system enhances data accuracy and simplifies the management of academic operations. Overall, the project demonstrates how cloud-based CRM platforms like Salesforce can streamline educational administration and improve productivity.

10. FUTURE SCOPE

- ✓ Integration with online fee payment systems for easier transactions
- ✓ Development of a student self-service portal for course registration and profile management
- ✓ Implementation of mobile application support for better accessibility
- ✓ Use of data analytics and dashboards to analyze student performance and course demand
- ✓ Integration with external learning platforms for digital course material.
